Attaching the Toll Box

- 1 Toll Box is already activated and **ready for immediate use.**
- 2 **Clean** intended area on windscreen.
- 3 Remove **protective film** from the adhesive strip on the holder.
- 4 **Attach** holder including Toll Box to inside of windscreen next to rear-view mirror, as shown in the graphic:

In motorhomes with alcove, we recommend mounting it centrally, approx. 15 cm above the dashboard on the windscreen.

Safety and usage instructions

- **Only install the Toll Box inside of the dotted field.** If no field is visible, please consult the manufacturer or the vehicle manual.
- Windscreens usually have an invisible metal coating. The Toll Box can only function properly inside of the dotted area – inside this so-called metal recess - as any kind of metal interferes with the Toll Box' signal.
- Do not label, paint or stick anything onto the Toll Box. Do not remove original stickers.
- Loss, theft or licence plate changes must be reported to maut1 immediately.
- When towing after a vehicle breakdown, the Toll Box must be removed and shielded metallicly, e.g. with aluminium foil.
- Only ship or transport the Toll Box from abroad with metallic shielding (e.g. aluminium foil) to avoid unintentional transactions.

Support & troubleshooting

Check position: The Toll Box must be attached inside of the dotted area (= metal recess) of the windshield

Test function: Approx. 50 m in front of the next toll booth, hold the Toll Box out of the side window in the direction of the booth until you have reached its barrier. By that you can find out if the windscreen interferes with the radio contact and causes the problem.

Problem at toll barrier: Scan the Toll Box' barcode at the station, use the emergency call button, take a ticket or pay on site. Please keep tickets and receipts.

! ATTENTION

The **correct mounting position** is a prerequisite for the Toll Box to function properly.

You can find further information in our online FAQs:
www.maut1.de/en/faq

The maut1 Toll Box is ready to go. Sit back, relax and leave the rest to maut1.
