

Carbon Reduction Plan

Supplier Name: Jupiter I.T. Limited

Publication Date: March 2026 (to be re-issued on verification of Scope 3 data)

Jungle I.T. Limited (Jungle) is a UK-based, managed IT services and consultancy company that helps businesses plan, run, secure and improve their technology.

Commitment to achieving Net Zero

Jungle is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline Year: 1st August 2024 - 31st July 2025

Additional Details relating to the Baseline Emissions calculations.

This is the first year of carbon reporting for Jungle IT, and therefore forms the baseline year of emissions. Jungle IT have not been obliged to report their carbon emissions in prior years. Despite this the company achieved a carbon neutral energy status for the financial year ending in 2024 by offsetting Scope 1 and Scope 2 emissions and retiring credits on the Verra Registry. This commitment to carbon neutral energy has continued in 2025.

Our emissions are estimated using carbon conversion factors published by the UK Government and we have set an operational control boundary for our carbon footprint activities. All sites and activities take place in the UK.

The data used in the estimations contains a significant proportion of primary data and is as accurate as the sources allowed at the time.

All emissions calculations follow the GHG Protocol Standard for approved calculation methodologies. We are undertaking a continual process of improving the quality of our internal data, which may result in a recalculation of the baseline in the future.

Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	6.43
Scope 2 (location-based)	21.14
Scope 3	TBC
Total Emissions	27.57 tCO₂e (Scope 1 and Scope 2)

Emissions reduction targets

This is the first publicly reported Scope 1, Scope 2 and partial Scope 3 carbon footprint for Jungle, and the first carbon reduction target to be published. We have set our 2025 financial year (FY2025) as our baseline year, in order to target and measure emissions reduction going forward. The company has however been actively reducing its carbon intensity for a number of years, without fully effective quantification. Some of the projects completed are detailed below.

In order to continue our progress to achieving net zero, we have adopted the following carbon reduction targets.

- Net Zero by 2050 across all Scopes.

We project that carbon emissions will decrease over the next five years as we look to implement a near term science-based reduction target.

Most of our baseline carbon emissions are an indirect result of our activities. At this stage in our carbon reduction journey therefore, we anticipate that we will need to offset a level of residual emissions from Scope 3 in 2050 to achieve net zero. This will be reviewed on an annual basis as technologies and facilities may emerge over time that enable a 2050 reduction trajectory of closer to zero emissions.

Carbon Reduction Projects

The following environmental management measures and projects have been implemented over recent years or are planned for the current period. The carbon emission reductions achieved by these schemes cannot be fully quantified, however the measures will be in effect when performing the contract and the ongoing impact will be monitored against our FY2025 baseline.

Lower Carbon Travel

The business has introduced a hybrid working policy to enable staff to work both from home, and the offices, to suit business needs. This has reduced the emissions associated with staff commutes to site.

Company cars are no longer diesel – all are electric to reduce business travel emissions. In addition, a travel pass for the train adjacent to the Kirkstall office is available for business journeys and mandated wherever possible.

Lower Carbon Deliveries

We have actively engaged with DPD as our preferred logistics provider in order to consolidate deliveries and maximise the electric vehicle courier service. Compared to diesel vehicle deliveries, we are reducing our environmental impact each year. All out outbound devices are also sent in 100% recycled packaging.

Device Lifecycle Management (DLM)

Sustainability is a natural part of how we run Device Lifecycle Management, but its impact is felt far beyond the device itself. It means managing the end-to-end process of IT provision for our clients, which consequently reduces IT waste, lowers our client carbon footprint, keeps technology in use for longer, cuts unnecessary deliveries and supports a genuine circular economy approach.

Re-Purposed Devices

Our teams actively look to re-purpose returned devices where possible. Giving them a second life generally via donation to charitable causes.

Environmental Management

The business achieved ISO 14001 Certification in 2024, which drives our continual improvement in data monitoring processes and reduction of our environmental impacts.

Carbon Neutral Energy

The business has offset its Scope 1 and Scope 2 emissions for both FY2024 and FY2025, maintaining a carbon neutral energy status. Carbon Credits were purchased and retired on the Verra Registry. This has been verified by an independent third party and forms part of our wider carbon reduction strategy.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions will be reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Leadership Team:
