

Distraction Screws

ACF Procedures

Precision Where It Matters

ACRA-CUT manufactures disposable distraction screws to the same high standards of precision and quality that define its cranial perforator products. Designed for use with vertebral body distractors during anterior cervical fusion procedures, these screws provide reliable performance and a consistent fit.

The ACRA-CUT distraction screw features a self-tapping tip designed to facilitate insertion.

Key Features

Designed for use with vertebral body distractors used in anterior cervical fusion procedures.

Engineered for strength and reliability during distraction procedures.

Supported by reliable inventory and product availability.

Sharp, self-tapping tip supports efficient screw insertion.

Individually packaged, sterile, and ready for use.

Supplied individually or in packs of 10.
