

Docker and Kubernetes Bootcamp

Get to know Docker and Kubernetes with this copebit AG service

Overview

Everyone is talking about Docker and Kubernetes. The trend has grown such that many businesses start to containerize their applications without even knowing the correct approach.

Containers come with new challenges and need a well-constructed packaging and testing framework to ensure an efficient and, most importantly, reliable operation of containers.

The scheduling of many applications and their layers which run in containers can't be operated manually anymore. An orchestration tool is necessary, and Kubernetes is the perfect choice for the job. Kubernetes can be operated from a private cloud as well as from any of the big cloud providers.

We at copebit have heard about these challenges from many of our clients. That is why we have created an offer for you to get to know Docker and Kubernetes.

Offer

The Docker and Kubernetes Bootcamp package includes the following services:

- 1-day Docker training, Docker theory, and implementation of a Docker environment
- 1-day Kubernetes training, introduction of the components and implementation of a Kubernetes cluster, deployment of a 3-Tier app
- 4-hour remote support for 2 weeks

The onsite training and workshops are organized by days. We will come to you and introduce the topic in a three-hour workshop. We will then implement the shown contents live with you on your own AWS account. You will have access to your Docker and Kubernetes environment for two weeks and will be able to internalize the acquired skills and discuss questions with us via remote support.

Advantages

- You will learn about the possibilities of Docker and Kubernetes in a quick and focused manner and with low costs.
- You will have the opportunity to build a Docker and Kubernetes cluster yourself.
- You will gain access to the extensive know-how of our Docker captains and certified Kubernetes specialists.
- You will acquire the skills to design well-architected Docker and Kubernetes infrastructures from scratch (using Best Practices).

Method.

The on-site days are a mix of introduction, theory, and workshops during which you will be able to apply the learned skills.

Target audience

- Developers
- IT and software architects
- IT operation personnel
- Managers of the before-mentioned positions

Costs

The complete package is available at the fixed price of 11'950 CHF and includes:

- 2 days of training on-site
- 4-hour remote support
- travel expenses for up to 60 minutes from Zurich

AWS costs are not included.

Most features and products can be trialed using the AWS Free Tier (i.e. without incurring any costs).

If any additional costs occur anyway, you will be charged independently.

The workshop will hold a maximum of 6 participants. If there are more participants, a second trainer will be present and the costs will be adapted accordingly.

The two modules (Docker and Kubernetes) can also be obtained separately. In this case, the costs are the following:

Day 1	Docker Training	6'500 CHF
Day 2	Kubernetes Training	6'500 CHF
