

You deliver electricity – we deliver performance. *The e-mobility software for when every minute counts.*

Intelligent charging. On-time delivery. There can be no downtime in logistics. That's why you need a charging infrastructure that works as reliably as your fleet. Operate your depot's charging stations with the chargecloud Operating System (OS) – for maximum availability and transparent control. Naturally e-truck-ready.

From charging to the last mile: chargecloud brings charging points, electric vehicles, and service providers together in one central system. This allows electricity, processes, and data to flow harmoniously, ensuring an efficient fleet and a stable balance sheet. Mile after mile, kWh after kWh.

Reliable EV charging
in sync with logistics.

A central system. For a clear overview.

Bring all national companies, depots, and sub-partners together in one software solution. The client and role model in the chargecloud operating system (OS) creates clear structures, automates billing, and transparently maps every cost center and every RFID or license plate assignment. This allows you to always keep an overview of usage, costs, and performance.

An open system. For growth.

Whether you have three trucks or a multi-location depot across Europe, the system adapts to your requirements. Open interfaces for telematics, TMS, and other IT systems, as well as manufacturer-independent hardware support, allow you to remain flexible and avoid dependencies. With automatic workflows, chargecloud simplifies even the most complex structures and creates the basis for sustainable growth.

A smart system. For control.

Operate your charging business in an audit-proof and brand-compliant manner using your own design. Thanks to automated white-label billing, including integrated e-invoicing, clear access rights, and seamless documentation, you can comply with all European regulations and retain full control over every charging session—even with sub-service providers and third-party vehicles.

AI Generated

Electric depot. Efficient fleet.

Successful balance sheet.

Ready for e-trucks

Charging points designed for electric trucks: with drive-in access, widths, heights, and power ratings up to 400 kW. License plate-based authorization ensures smooth depot access without a driver app.

Everything at a glance – from headquarters to the depot

One system for all operators, depots, and partners. Automated subcontractor billing and clearly defined roles bring order to complex fleet and employee structures.

Every kWh traceable, every minute under control

Dashboards show performance and availability in real time. SLA monitoring and reports document everything in an audit-proof manner. This ensures greater transparency and verifiable operational quality.

Just get started – even without your own IT department

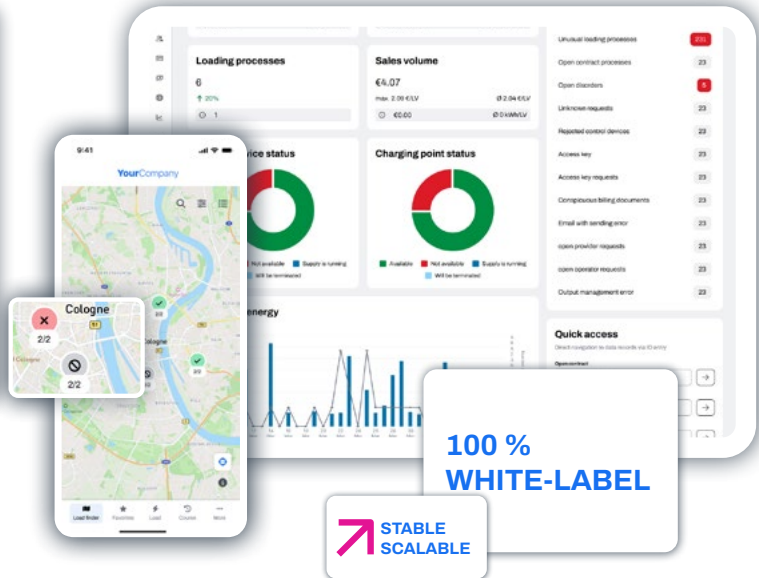

White-label setups enable professional charging services for smaller logistics companies. Sub-partners launch independently via portals. Electrify your depot without the need for a development team.

Charge according to plan, not by chance

With slot planning and TMS integration, you always know when which vehicle is charging. This prevents bottlenecks during shift changes and saves time when planning each route.

Reduce energy consumption, use your own electricity

PV and energy management systems can be easily connected via the chargecloud Marketplace. This automatically controls charging capacity, makes optimal use of solar power, and avoids expensive peak loads in the depot.

Trust is good – compliance is better!

With chargecloud, you are always on the safe side: thanks to European data protection and IT security standards, regular updates and ISO 27001-certified operations that meet the highest requirements for information security, cyber security and data protection.

Software Made in Germany

ISO/IEC 27001 certified

ISO 9001 certified

DSGVO compliant

Secure TLS Encryption

ISO 14001 certified
