

Enterprise-level e-mobility software.

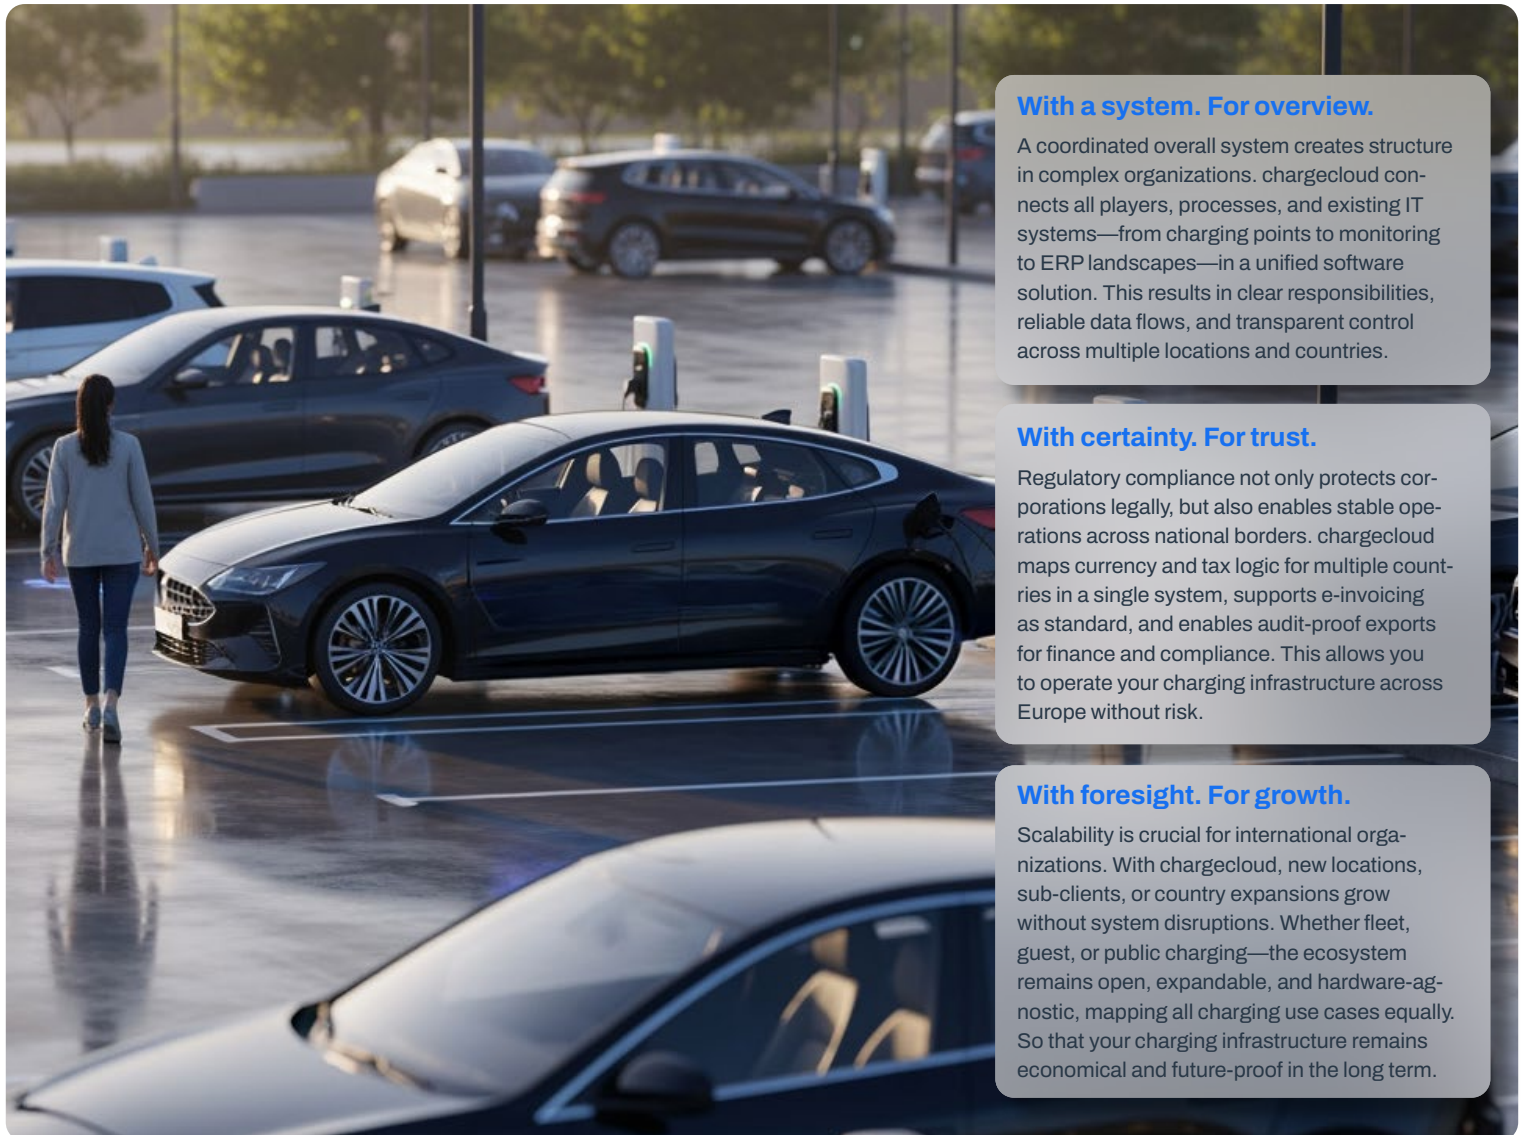

Your partner for every EV charging scenario.

Standardize structures, audit-ready billing, scale charging infrastructure. With the chargecloud ecosystem, corporations and large companies gain full control over operations, data, and billing. It can be centrally controlled across all locations and even across country and currency borders. SLA-based support and enterprise support with a clear contact person ensure fast decisions, stable processes, and maximum operational reliability.

At the heart of it all is the chargecloud operating system, which combines technical and operational processes in one system. Whether monitoring, e-invoicing, or mapping a wide range of charging use cases—all tasks are coordinated and run together. Thanks to a true multi-tenant setup, enterprise-ready integrations, and audit-proof processes, the operation of your charging infrastructure remains reliable and legally compliant—no matter where, no matter how big.

Full control. Maximum integration.

This e-mobility software is simply a perfect fit.

With a system. For overview.

A coordinated overall system creates structure in complex organizations. chargecloud connects all players, processes, and existing IT systems—from charging points to monitoring to ERP landscapes—in a unified software solution. This results in clear responsibilities, reliable data flows, and transparent control across multiple locations and countries.

With certainty. For trust.

Regulatory compliance not only protects corporations legally, but also enables stable operations across national borders. chargecloud maps currency and tax logic for multiple countries in a single system, supports e-invoicing as standard, and enables audit-proof exports for finance and compliance. This allows you to operate your charging infrastructure across Europe without risk.

With foresight. For growth.

Scalability is crucial for international organizations. With chargecloud, new locations, sub-clients, or country expansions grow without system disruptions. Whether fleet, guest, or public charging—the ecosystem remains open, expandable, and hardware-agnostic, mapping all charging use cases equally. So that your charging infrastructure remains economical and future-proof in the long term.

The stable foundation for group-wide EV charging.

All locations under control.

A central system makes your complex charging infrastructure clear and controllable. This gives you a complete overview of operations, users, and billing—at every location and in every country.

Integration that works.

Thanks to open interfaces, chargecloud integrates seamlessly into your existing IT and financial landscape. No isolated solutions, no double maintenance – all relevant systems work together in a coordinated manner.

Secure billing – across Europe.

Currency and tax logic for multiple countries in one system ensures audit-proof processes. E-bills and standardized exports enable transparent and audit-proof billing at corporate quality.

Scalable as standard.

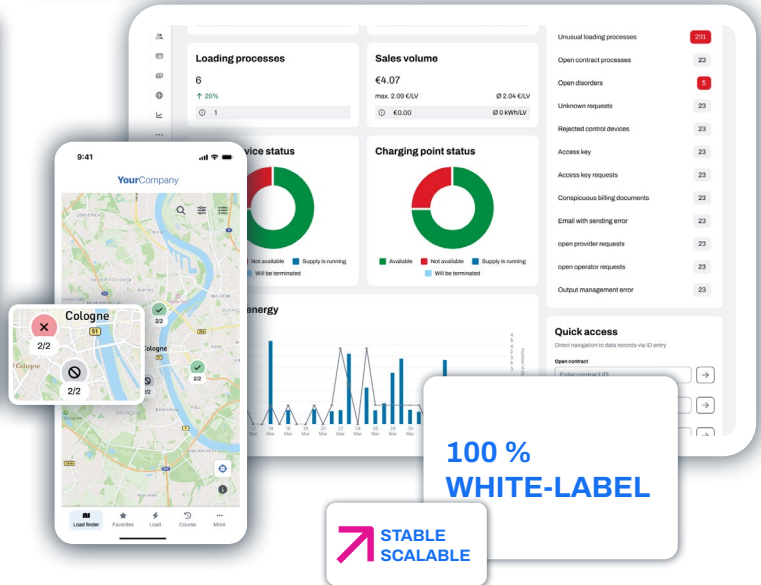

Whether new locations, sub-clients, or electric fleets – your structures grow without changing systems. chargecloud adapts to your business, not the other way around.

Operation that delivers what it promises.

SLA-based monitoring and enterprise support with a clear contact person ensure short distances, stable processes, and maximum availability.

Trust that lasts.

Designed for longevity and process reliability, chargecloud supports you every step of the way—from rollout to ongoing operation. This makes electric charging a reliable part of your corporate infrastructure.

Trust is good – compliance is better!

With chargecloud, you are always on the safe side: thanks to European data protection and IT security standards, regular updates, and ISO 27001-certified operations that meet the highest requirements for information security, cybersecurity, and data protection.

Software Made in Germany

ISO/IEC 27001 certified

ISO 9001 certified

DSGVO compliant

Secure TLS Encryption

ISO 14001 certified
