Poultry houses boosts income generation in Acuí

The mining company Artemyn is moving forward with support for the construction of eight poultry houses planned for construction of the Acuí community, located near its operations in the city of Barcarena, Brazil. The family poultry houses project began in February of this year, based on research into the region's potential and local families' productive capabilities.

Today, three poultry houses are already operational, one producing eggs and two raising chicks, while the remaining ones are on schedule for construction in 2026 and 2027. In total, the facilities will have a capacity for approximately 700 laying hens.

Artemyn provides ongoing technical support for these facilities. The initiative encourages egg production and sales, helping generate income and strengthen families' self-reliance in the Acuí community.

The poultry farm encourages us to seek extra income and helps us transform our professional and economic reality"

Deise de Luque Franco, a resident of Acuí community who works at the local poultry farm.

Painting Green, cultivating environmental awareness

In July, 350 children from the six communities neighboring to the Artemyn industrial plant, in Barcarena, in northern Brazil, participated in the "Painting Green" Summer Camp. The initiative combined recreation and environmental education in a special program.

Through workshops and inter-

active activities, children learned how to take care of the environment and adopt more sustainable behaviors in their daily lives. The project goes beyond fun; it reinforces Artemyn's commitment to environmental education and to nurturing future generations in the region where it operates.

For Anita Souza, mother of

one of the children from Vila do Conde, a community near the company's Barcarena operations, who participated in the activity, "children had a morning full of games, fun and snacks. It was a joyful moment, we really enjoyed it and would love to have this kind of event again in our community with our children."

More professional training at Barcarena

In August, Artemyn launched the “Seja Pro+ Trabalho” program in partnership with the Social Service for Industry (SESI) at Espaço Artemyn in Vila do Conde, a community in the city of Barcarena, Brazil, where the company operates. The first class has 14 community participants.

The initiative expands access to high school education and vocational training, focusing on strengthening knowledge and developing skills for the job market.

In addition to supporting the students’ personal growth, the program helps create new opportunities and contribute to the region’s socio-economic development.

According to the SESI manager in the city of Barcarena, Natanael de Oliveira, “this partnership represents an important opportunity for transformation in the lives of workers. We are combining education and professional training so that they are better prepared for the challenges of the job market.”

After many years without studying, participating in the project has been very rewarding. I’m gaining new knowledge. It’s rewarding to participate,”

said Rosilene Leston, a participant from the Curupê community.

Talents that generate income

Espaço Artemyn, located in Vila do Conde, near the company's Barcarena operations, Brazil, is a key center for entrepreneurship training and professional development for residents of the six communities surrounding Artemyn's mine.

The income-generating workshops offer training and certification in culinary arts, resin crafts, and candle making. These initiatives foster entrepreneurship and family self-reliance.

In the first half of this year, more than 70 people were trained, strengthening their skills and creating new opportunities for the communities.

One workshop participant was Marineide Sousa, a resident of Vila do Conde, who took part in the resin crafts workshop. She says the training was very important because she can immediately put what she learned into practice. "I'm already investing in materials and products to start working with resin. I'm sure this activity will become an important source of income."

Support for Public Safety

Artemyn donated bricks and cement to the 6th Military Fire Brigade (6º GBM) in Barcarena, Brazil. The materials are being used to build the barracks wall. As for the 15th Military Fire Brigade in the city of Abaetetuba, also in Brazil, the company donated a shipping container to support the Soldier Training Course, to be used for confined-space firefighting training. It serves as a practical training tool, significantly improving training for new firefighter training classes. The container was adapted for practical activities with support from Rivello, a local partner.

These initiatives help improve the units' performance, helping strengthen the services provided to communities in Barcarena, Abaetetuba, and other locations in the Lower Tocantins region of the state of Pará—Artemyn's areas of operation in Brazil.

Long Live the Amazon!

On September 5, we celebrate Amazon Day, honoring the largest tropical rainforest on the planet! It's home to incredible animals full of fascinating traits. How about testing your eyes and finding six animals typical of our forest hidden in the word search? Grab your pencil and let's get started!

WORD SEARCH OF THE AMAZON

IPIXUNA DO PARÁ | ARCC

» Nº 09 – SEPTEMBER 2026

Children from six communities participate in summer camp

In July, Artemyn held a summer camp for 73 children from the Espaço Artemyn After-School Tutoring Program who live in six neighboring communities of Artemyn's kaolin mine (ARCC Mine), in Ipixuna do Pará, Brazil.

During the activities, children took part in games, educational activities, music, painting, and other recreational pursuits, promoting inclusion and social interaction.

The initiative aimed to provide opportunities for learning and fun during the school break, fostering the children's cognitive, motor, artistic and socio-emotional development. The initiative is part of Artemyn's Basic Education Support Program. It aims to support academic enrichment by providing activities related to the teaching and learning process through sports and recreation in the communities.

“The activities were excellent for my daughters during the vacation period and they were very happy to participate,”

Maria Raimunda Cunha, a resident of the Fé em Deus neighboring communities of Artemyn's kaolin mine, in Pará, Brazil, and mother of two girls who attended the summer camp.

Workshop strengthens family farming at Ipixuna

In August, Artemyn held family-strengthening workshops with 12 families from the communities of Santo Antônio and Santa Maria do Bacuri, near the kaolin ARCC Mine in Brazil.

The activities covered agro-cultural techniques for setting up hanging gardens. They also included distributing materials and supplies to implement these practices. All stages were carried out collectively and based on agroecological principles.

The initiative strengthened communities by encouraging families to grow food for their own consumption and seek alternative ways to supplement their income.

According to Marilene Manito, a resident of the Santa Maria do Bacuri community, located near the ARCC Mine in Brazil, “the activity was very important for everyone who participated, as it will help provide healthy food for their families while also saving money on food purchases.”

Sensory Tour Brings Environmental Education to Children in Ipixuna

As part of the “Bem-Vindo Comunidade” [Welcome Community, freely translated] Program, which welcomes community members to Artemyn’s facilities and in conjunction with the Environment Week program held in June, Artemyn welcomed 14 participants from the Fé em Deus community, located near the company in the city of Ipixuna do Pará, Brazil, to its seedling nursery. The group included 13 children from the After-School Tutoring Program and one teacher.

The company also provided trans-

portation for the group. During the “Sensory Tour,” held at Artemyn’s facilities, students experienced nature through their five senses.

The activity sparked the children’s curiosity, heightened their awareness of the environment and helped them build a closer, more mindful relationship with it.

The activity provided a practical and interactive environmental education experience, taking participants beyond the school setting and bringing them closer to the work carried out at the seedling nursery.

“It was wonderful to see their curiosity and enthusiasm throughout the activity. I believe experiences like this contribute not only to learning about the subject but also to developing environmental awareness, responsibility and respect for nature. It’s a learning experience that goes beyond textbooks and will certainly remain in the children’s memories.”

Dulcinete Queiroz
Prestes, class teacher.

Mother Earth: Bringing Environmental Stewardship to Students in Ipixuna do Pará Communities

In June, Artemyn carried out several environmental education initiatives at schools in the communities of Santa Maria do Bacuri, Aparecida, Cajueiro, Fé em Deus, and Deus por nós, near to ARCC Mine in Ipixuna do Pará, Brazil. The activities brought together more than 150 elementary school students from these schools.

The students received guidance on the importance of environmental preservation and caring for “Mother Earth.” In Bacuri community, younger elementary school children participated in hands-on activities, including instructions on planting seedlings and receiving seedlings to plant at home.

The initiative aimed to introduce children to environmental stewardship practices, fostering environmental awareness and the adoption of sustainable behaviors from an early age.

As a teacher, I found the activity important and meaningful for the students. In addition to learning about the importance of environmental preservation, they had the opportunity to put this knowledge into practice by planting the seedlings. It was a moment of learning, participation, and greater environmental awareness that helped foster care for and respect for the environment among the students.”

Fernanda Monteiro, the class teacher in the Santa Maria do Bacuri community.

Better Infrastructure for Student Meals in Ipixuna do Pará

An institutional partnership between Artemyn and the municipal public school system in Ipixuna do Pará, in northern Brazil, resulted in the delivery of two new freezers to the local school system, benefiting schools in the communities of Santa Maria do Bacuri and Nossa Senhora Aparecida.

Near Artemyn's ARCC Mine in Ipixuna do Pará, the schools received the equipment to improve the storage of food for school meals and enhance the quality of the food provided to students.

The initiative directly benefits approximately 303 students, with about 198 from Santa Maria do Bacuri School and 105 from Nossa Senhora Aparecida School.

"Actions like this demonstrate Artemyn's social commitment and its support for education and our school community," notes the schools' administrator, Clarice Aguiar.
