

Cloudya App for Microsoft Teams*

Seamless communication inside a familiar environment

Does life have to be this complicated?

It's ironic – the business tools you use to make life simpler are making it more complicated. Your people spend all day in Microsoft Teams*. And then there's the landline. Life would be easier if these two communication platforms actually talked to each other.

"We can make do as we are, thank you very much"

But for how long? With your competition moving forward, standing still means getting left behind. Your costs will grow over time and your people will tire of endlessly switching between Microsoft Teams* and the phone with no joined up history or contact list.

But wouldn't life be simpler if...

With no need for extra licences, the Cloudya App for Microsoft Teams* delivers cloud telephony within the user interface you're so familiar with. Increase efficiency with seamless communication inside a single virtual environment, no matter where your people are working from. You can also take advantage of Cloudya PBX features to boost productivity.

Now you're talking

Turbo-charge profitability with time and cost savings

Access the telephony you need from the **Microsoft Teams* side bar**

All your Cloudya and Microsoft Teams* contacts **in one place**

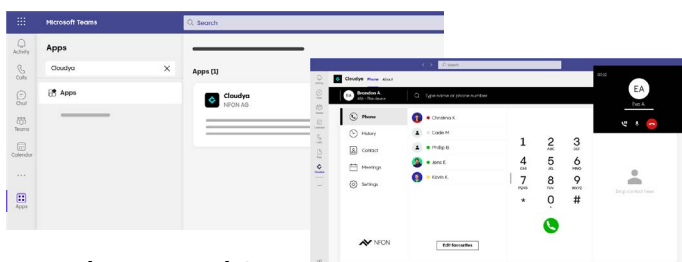

Shared call history for super-seamless user experience

Call mobiles or landlines **straight from Microsoft Teams**

SAY HELLO TO NFON

How does It work?

Install the app directly from the Microsoft Teams* [App Store](#). Open the app within Microsoft Teams* and all your usual Cloudya features like favourites, settings and voicemail will then be available to use directly from there.

Why NFON?

- ✓ Pan-European provider that offers ways for every customer to integrate telephony in Microsoft Teams*
- ✓ No outrageous set-up fees
- ✓ Local 24/7 support in your own language
- ✓ There's safe and secure – and then there's German safe and secure

NFON Integration for Microsoft Teams*
Connecting internal and external phone calling
