

Encompass Health Case Study

Encompass Health is the largest owner and operator of rehabilitation hospitals in the United States. With a national footprint that includes more than 170 hospitals in 39 states and Puerto Rico, the Company provides high-quality, compassionate rehabilitative care for patients recovering from a major injury or illness, using advanced technology and innovative treatments to maximize recovery.

The Problem

Encompass Health Corporation's design and construction management team is responsible for planning and executing the capital improvement plan for all new and existing facilities. Previously, they utilized different systems, such as PeopleSoft Financials, MS Excel, and a data warehouse, to plan and manage their projects. Encompass Health needed a solution that standardized and centralized its project management processes to spend less time gathering information and more time managing its projects.

The Solution

The Broadpin team:

- Implemented the Oracle Primavera Unifier Accelerator package.
- Migrated all the project-related data from Peoplesoft to Unifier as part of rolling out the new Project Management Information System (PMIS).
- Integrated Oracle Fusion PPM with Unifier.

The successful implementation of Encompass Health's cloud-based PMIS solution hosted on Oracle Cloud Infrastructure (OCI) assists the project controls team in managing projects more effectively.

The results

- Reduced errors in tracking and approving contract and invoice information in Unifier before it is interfaced with Fusion.
- Decreased manual efforts, leading to improved efficiency in project management and ultimately resulting in cost reductions.
- Enhanced reporting capabilities.
