WE ARE
Woolpower[®]
ÖSTERSUND

At Woolpower, each garment is a testament to craftsmanship and care. Under one roof in our Östersund factory, we house the equipment to knit, prepare, and sew our garments. But above all, it's the people who make it all possible.

We craft every piece from start to finish, ensuring flawless quality. At last, the seamstress signs each garment with their very own name, a seal of quality and pride. When you wear Woolpower, you're wearing more than just clothing — you're wearing values of fairness and respect.

WOOLPOWER

QUALITY IN EVERY SENSE

Woolpower is living proof that a clothing company can provide reasonable salaries, safe employment and a working environment that people enjoy being in. Ever since our factory opened in Östersund all our garments have been sewn here. This allows us to maintain the highest possible quality.

Circular knitting

Each year, hundreds of tons of merino wool yarn is delivered to the factory in Östersund. This is where the knitting process begins. We use circular knitting machines to produce the sleeves, legs, body, and socks for our Woolpower garments. Using this technology means that garments have a minimal amount of seams for the best durability and comfort.

Our experienced seamstresses

At Woolpower, one seamstress is responsible for sewing an entire garment, from the very first to the very last stitch. This makes the work more varied and enhances their craftsmanship. Once the seamstress completes a garment and approves it, a label with their name, is attached to it. This label is the seamstress and Woolpower's - seal of quality.

A warm company

Warmth is central to our mission in every sense of the word. We make warm woolen products, and we also aim to be a warm company that takes good care of its employees, partners, animals and the environment.

Sustainability

Owning our factory in Östersund gives us significant control over our environmental footprint. During recent years we've taken another important step towards our sustainability goals. For example, we only use renewable electricity and waste fabric from our production line gets recycled into our popular Felt Insoles and our Sit Pads. Our production is certified in accordance with ISO standards. The garments made of Ullfrotté Original fabric is certified according to STANDARD 100 by OEKOTEX®, a globally standardized independent mark of quality for textile products tested for harmful substances.

NAME: Helene Eriksson
OCCUPATION: Seamstress

Helene has worked at Woolpower since 2023.

My sewing journey started in Indonesia, and after living in Sweden for more than 30 years I never expected to find that sewing factories still exist here. Discovering Woolpower was such a surprise that I decided to move from southern Sweden to Östersund in 2023. I find working at Woolpower exciting, and one of my favorite parts is using my wellness time to take walks in the forest just outside the factory.

ULLFROTTÉ ORIGINAL

INVENTED TO LAST

The unique Ullfrotté Original material was developed for the Swedish military, together with other specialists such as doctors and scientists as early as the early 1970s. The result was a garment with great insulation properties and unique moisture management. It's a wear-resistant fabric that actually makes you feel warm and dry even when moist.

Synthetics add strength

Merino wool is a material that has excellent temperature regulation properties, but its wear resistance is not optimal. To bolster Ullfrotté Original's wear resistance, the Merino wool is mixed with one-third synthetics. This gives the garment the strength needed to meet the high-quality standards of Woolpower, without taking any of the excellent properties of the wool away.

Terry loops trap the air

Ullfrotté Original is knit so that one side of the fabric is flat and the other has smooth terry loops. It is the terry loops in combination with the loose knit wool fibres that make our garments capable of trapping such a great amount of air. Up to 80 percent of Ullfrotté Original actually consists of air. The terry surface also offers the benefit of wicking moisture away from the skin.

Wash less often

Wool, is easy to take care of and doesn't smell bad. The ability of wool fibre to absorb and neutralise bad odours is far superior to other textile materials. This means that you do not have to clean your Ullfrotté garments that often. Simply hanging them outside for a bit can be enough. However if needed Woolpower garments can be machine washed at 60 °C (140 °F)*. They can also be tumble-dried at medium heat but as with all clothes this shortens the lifespan of the garment. When you wash your clothes, you can use Woolcare, our own washing detergent for wool. It's a gentle detergent that contains lanolin, the natural fat found in wool, which helps to nurture the fine qualities of wool. You can also use a normal detergent, or just wash with water.

Ullfrotté
ORIGINAL

MERINO WOOL

A REMARKABLE MATERIAL

Temperature regulation is one of the most important functions in comfortable underwear. Wool has remarkable characteristics that no science lab has yet been able to replicate synthetically. In all Woolpower garments we use Merino wool, a perfect fibre to insulate against both heat and cold.

Together with our suppliers

We purchase our Merino wool from the Uruguay and the Argentinian part of Patagonia. There, we have a constant dialogue with our suppliers about animal treatment and the sheep farmers' impact on the environment. Of course, we only use guaranteed mulesing-free wool.

Wool for insulation

Merino wool is the perfect material to use when you want to stay warm. The secret is in the air, the more air you can trap around the body, the more heat you can retain. And the crimp structure of the wool fibre traps large quantities of air. Merino wool has up to 40 creases per centimetre, which provides a remarkably high degree of insulation.

Warm even when moist

The natural wool fibre also works together with your body when you get wet. Wool can absorb up to 30 percent of its dry weight in moisture without feeling damp. So it keeps you warm – and it also transports moisture away so that you feel warm and dry for longer.

Non-itchy thickness

The Merino wool used in our own Ullfrotté Original material is 22,5 micron. Due to the terry loops on the inside, the amount of contact zones are very few. 22,5 micron is therefore thin enough to give a comfortable, non-itchy material, but thick enough not to break easily. Our rib knitted LITE material is made from wool fibres with a thickness of 19,5 micron. Due to rib knitted material having more contact with the skin, this thinner fibre is required to remain comfortable and non-itchy.

CLOTHES DON'T PROVIDE HEAT BUT YOUR BODY DOES

A system for heat regulation

When the weather is cold, the best way to stay warm is by following our layering system. Layered clothes help you retain your body heat since the layers bind more air and therefore create more insulation. At the same time, the layers transport away the moisture and excess heat that your body doesn't need. By using the layering system, it's easy for you to adjust your clothing based on your activity level at any moment. More layers for low activity, fewer layers for high activity.

Choose the right thickness

Woolpower has developed an entire collection of garments for the whole body that can be combined differently depending on the temperature and form of activity. Our garments are produced in varying thicknesses for different functionality and benefits. Our base layer materials are LITE and Ullfrotté 200. Our mid Layer materials are Ullfrotté 400 and Ullfrotté 600.

INSULATION SCALE

ULLFROTTÉ 600 - MID LAYER

The thickest of our terry-knitted mid layers is called Ullfrotté 600.

ULLFROTTÉ 400 - MID LAYER

Ullfrotté 400 is a terry-knit mid layer that creates extra insulation.

ULLFROTTÉ 200 - BASE LAYER

Ullfrotté 200 is a terry-knit base layer that traps a lot of air, making it warmer than LITE.

LITE - BASE LAYER

LITE is a flat-stitched fabric, which makes it cooler than Ullfrotté.

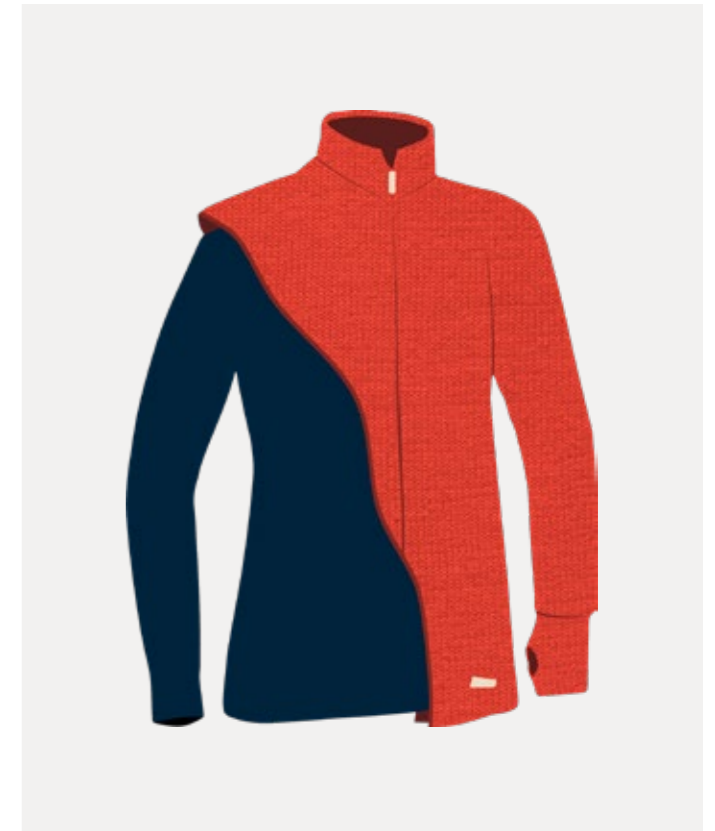

WOOLPOWER LAYERING SYSTEM

1. LITE OR ULLFROTTÉ 200 FOR UNDERWEAR

The base layer keeps your body at just the right temperature and also helps remove moisture at the same time.

All Woolpower's Ullfrotté 200 garments are circular knit, which means they don't have any uncomfortable seams that can chafe and break.

The LITE fabric is flat-knitted which gives more direct contact against the skin than Woolpower's Ullfrotté Original fabric. That means that heat is conducted more easily from the skin through the garment. LITE garments are perfect as a cooler alternative.

2. ULLFROTTÉ 400-600 FOR INSULATION

Add one of Woolpower's Ullfrotté garments as a mid layer to increase insulation between the base layer undergarment and your wind- and water resistant outer layer.

Ullfrotté gives excellent insulation and both Ullfrotté 400 and 600 are round knitted without unnecessary seams. Woolpower mid layers are best used in colder temperatures or during less intense activities.

On top of the mid layer, add an outer layer that can withstand wind and water. In even colder temperatures, insulated garments can worn.

WOOLPOWER

LITE

Base Layer

Woolpower LITE is a thinner fabric that is good to use all year round. It feels cool against the skin during warmer weather and warms the body when the cold creeps in. It is also an excellent base layer to wear underneath our thicker clothes in Ullfrotté Original.

The LITE fabric is 1:1 rib-knitted tricot which allows for more direct contact with the skin than Woolpower's Ullfrotté Original fabric. That means heat is transported more easily from the skin and out through the garment. This in turn makes the LITE products perfect as a cooler alternative, for highlevel activity and/or warmer temperatures. Woolpower LITE stretches the season for Woolpower garments, and can be used all year around. A 19,5-micron merino wool is combined with 20% polyamide fibre to create a stronger and more durable garment. Functionality remains the primary focus. There are no more seams than absolutely necessary and the fabric is a very soft, smooth and stretchy 1:1 rib-knitted tricot.

LITE still provides insulation, but more importantly its merino wool adapts to temperature and activity levels.

WOOLPOWER

ULLFROTTÉ

200

Base Layer

This is our thinnest undergarment in terry-knit Ullfrotté Original. Every garment is made from different sizes of tubes, which means that we have minimized the amount of seams. This creates a garment that is more durable and with less chafing from seams.

The garment is designed to be worn next to the skin as a moisture wicking base layer. The terry loops and the overall loose knitting gives unique insulation compared to the fabric weight.

By wearing the Ullfrotté 200 base layer closest to the body you will benefit from all the best functions terry loop wool garments provide: insulation, perspiration transport and comfort. It is also great in combination with Woolpower LITE.

WOOLPOWER

ULLFROTTÉ

400-600

Mid Layer

Woolpower's robust mid layer garments, made from Ullfrotté Original fabric in weights of 400-600 grams, are designed to offer superior insulation.

A mid layer serves the purpose of providing extra warmth by trapping body heat, which is essential in cold weather or during low-intensity activities.

The key to effective insulation lies in creating an air layer within the clothing—more air means better insulation.

For colder conditions or lower activity levels, a thicker mid layer is required. The ideal thickness depends on both the temperature and the level of physical activity, ensuring optimal warmth and comfort in varying conditions.

STAY SAFE AT WORK

Wool is made of keratin, a substance that has low flammability and doesn't melt. Wearing a base layer that doesn't melt means it takes longer for heat to affect the body, which can reduce the severity of burn injuries.

It's a challenge to make underwear that offers good insulation from the cold while also protecting the body according to ISO standards for PPE (Personal Protective Equipment). You want to minimize the amount of oxygen in order to not feed the flames while trying to trap as much air as possible close to the body to optimize the insulation effect. At Woolpower, we've worked hard to optimize the combination of insulation and protection.

As a result, we have developed our Woolpower Protection product line, made for the high demands of the professional user. Our products conforming to specific EN standards, such as Flame Resistance, Antistatic or Electric Arc, are grouped under the name Woolpower Protection.

The Woolpower Protection product line consists of the base layer garment Woolpower Protection LITE, the mid layer garment Woolpower Protection 400 and accessories.

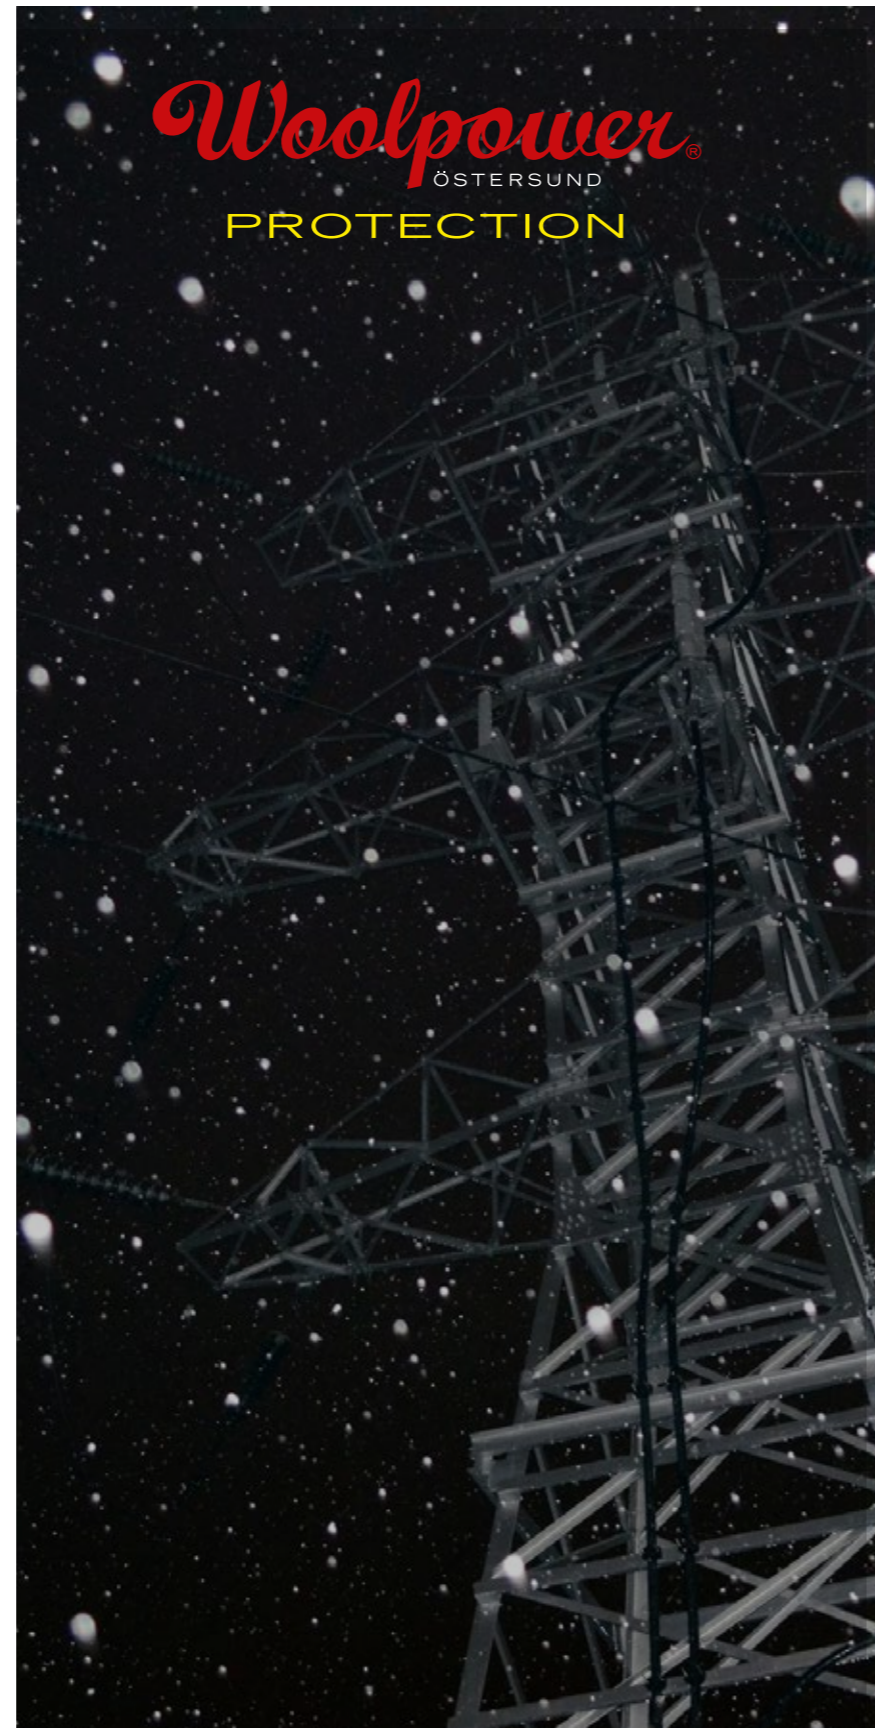

As part of our responsibility to the environment we don't add chemicals, such as Bromide, in order to achieve flame resistance. Instead we get it from the unique characteristics in the fiber composition.

For maximum protection we recommend using our entire line of certified garments together with appropriately certified outer garments.

All our products in the Protection line are tested and certified at SGS Fimko in Finland. Protection LITE has also been tested in the US to meet the minimum requirements of ASTM 1506-10A for apparel materials in NFPA 70E.

FOR EVERYDAY USE AND UP TO MEDIUM INTENSITY ACTIVITIES

Warm Reinforcing socks

SOCKS 800

Our thickest Ullfrotté sock. Ideal for the coldest days and coziest hangouts, whether indoors or outdoors. Perfect for sleeping outdoors or wearing in rain boots on chilly days.

SOCKS 600

Perfect for boots on a wet autumn day or as a must-have on any outdoor trip. After a day of hiking, switch to Socks Classic 600 and slip into your sleeping bag. Can also be worn as an insulating layer in roomy shoes.

SOCKS 400

A warm sock where the Ullfrotté lining keeps your feet cozy in autumn, winter, and spring. Perfect for added warmth for example as a second layer in roomy hiking boots or low-intensity activities in cold conditions. A reliable classic in the cold.

ACTIVITY LEVEL

Socks for Layering

SOCKS LOGO 400

One of our most popular sock. The insulating Ullfrotté on the foot and ribbed leg provide a fit ideal for hiking boots, either on its own or layered with Socks Liner for extra insulation keeping feet warm and dry all year round.

SOCKS 200

Our thinnest Ullfrotté sock, offering surprising warmth despite its slim design. Fits most shoes and works well for everyday wear or outdoor activities. Can also be worn as a thin second layer in with Socks Liner Classic or Skilled Liner Classic.

SOCKS LINER

Socks Liner are designed for both everyday wear and outdoor activities. Perfect for the office or cycling to work, they also work as a thin first layer, keeping your feet warm and dry closest to the skin.

ACTIVITY LEVEL

TECHNICAL SOCKS FOR ACTIVITIES AND HIGH PERFORMANCE

Everyday & Activity sock

SOCKS LOGO MOTION

Socks Logo Motion are versatile activity sock designed for comfort and support in everyday use and medium-intensity activities. The new calf and ankle grip keeps them securely in place, while insulating panels provide warmth where needed most. Knitted with Ullfrotté Original in the foot and a ribbed shaft for a snug fit, they work just as well for daily walks as for outdoor adventures on chilly days.

ACTIVITY LEVEL

Activity Sock for High Performance

SOCKS SKILLED 400

A thicker technical sock combining Ullfrotté Original 400 with flat-knit and compressive panels for comfort and durability. Elastic bands around ankle and calf ensure a secure fit, while the mesh panels enhance breathability and moisture transport. The reinforced heel, integrated toe seam, and added support over the instep makes the sock a reliable choice for cold-weather activities.

SOCKS SKILLED LINER

A thin, technical sock developed for maximum functionality. Flat-knit with elastic bands around ankle and calf to stay in place, with breathable mesh panels that transport moisture and provide ventilation. Reinforced heel, integrated toe seam, and extra support over the instep make it an ideal first layer to prevent blisters and keep feet comfortable during activity.

ULLFROTTÉ

200-800

Socks

Since 1972, Woolpower has been knitting socks for all types of weather and occasions in our factory in Östersund. Over the years, we have learned what it takes to create socks that keep you warm and dry whether you're skiing, camping, or spending time outdoors. Drawing on our experience with cold weather and functional products, we have developed a range of socks suitable for every occasion. You can trust them for any adventure you embark on.

We manufacture socks in various thicknesses for different activities, ranging from thin wool liners to thicker socks in our unique Ullfrotté Original material. The thinner Liner socks are classic flat-knitted socks made with 60% merino wool, while our thicker socks are knitted in Ullfrotté in various thicknesses from 200-800.

WOOLPOWER SKILLED LINER

WOOLPOWER SKILLED LINER is a technically constructed flat-knit sock, designed to prevent blisters. When you move, Skilled Liner Knee-high seal around your foot and stay in place.

Around the ankle there is a stabilising elastic band. It tightens around the ankle and holds the sock in place. On top of the foot there's a breathable mesh panel that transports moisture away from the foot. There is extra support for the arch, the heel is reinforced and the toe seam is integrated.

WOOLPOWER SKILLED 400

WOOLPOWER SKILLED 400 is a technically constructed sock that uses a mix of flat-knit, terry knit and supportive knitting to get the best fit, insulation and comfort.

They are designed to optimize your experience in the nature. When you move, Skilled Knee-high 400 seal around your foot and stay in place which gives extra support and prevents blisters. On top of the foot there's a non-crease panel that tightens the front so that it sits firmly on the foot. There is extra support for the arch, the heel is reinforced and the toe seam is integrated.

WOOLPOWER ACCESSORIES

To stay warm, it's crucial to consider your whole body. In cold conditions, the body prioritizes heating vital organs, reducing blood flow to your hands and feet, which is why they feel cold first. An uncovered head also allows significant heat loss. Keeping your core and head insulated helps maintain overall warmth.

Ullfrotté
ORIGINAL

Beanie Classic
Art no: 9854

Beanie Classic is an everyday beanie. The beanie is double-layered and rib-knitted giving it a good fit and shape. The folded edge of the beanie can be rolled down.

ONE SIZE

Beanie LITE
Art no: 9621

Snug fitting beanie with double layered fabric for optimal insulation.

ONE SIZE

Helmet Cap 400
Art no: 9644

The snug fitting helmet liner covers the head and neck.

ONE SIZE

Tube LITE
Art no: 9601

Tube that can be used as a neck gaiter, headband or beanie. 40 cm long.

ONE SIZE

Mittens Thin 400
Art no: 9744

Mittens Thin are made from single layered wool terry knit fabric and are excellent as warmer liners for mittens. The seam is on the outside.

M - L

Beanie Rib
Art no: 9866

Beanie Rib is a classic, 2:2 rib-knitted beanie. The thicker yarn used for this beanie creates a slightly thicker beanie, perfect for our northern climate. The beanie is shorter to fit tightly against the head and it has a wide folded edge.

ONE SIZE

Cap 400
Art no: 9624

Cap has double layers of wool terry knit fabric for optimal insulation.

ONE SIZE

Headband 200
Art no: 9612

The headband is made of double layers of wool terry knit.

ONE SIZE

Tube 200
Art no: 9602

Tube 200 is made of circular wool terry knit fabric. Can be used as beanie, headband and neck gaiter. 30 cm long.

ONE SIZE

Mittens 400
Art no: 9754

Mittens 400 are made from double-layered wool terry knit for optimal insulation. Ideal as warm liners for shell mittens.

M - L

Balaclava LITE
Art no: 9651

The snug fitting balaclava. Thin but still offers great protection in cold weather. The flatlock seams prevent chafing so the balaclava can be used under a helmet.

ONE SIZE

Felt Insoles DIY Felt Insoles
Art. no 5715 Art. no 57251400

Felt Insoles made of production waste from fabric in various colours. The high wool content gives good insulation and moisture management properties. The colour differs depending on what waste fabric that has been used but will be predominantly grey.

36 - 37 | 38 - 39 | 40 - 41 DIY Insole
42 - 43 | 44 - 45 | 46 - 47 Size: 31 x 11 cm

COLOUR: Recycle Grey

Sit Pad
Art. no: 9785

Sit pads made of the recycled Merino wool from our own production waste. The colour can vary depending on the different colours of the waste, but will be predominantly grey. The Woolpower logo is sewn in as a label with text on the other side. Available in three sizes.

COLOUR: Recycle Grey

Balaclava 200
Art no: 9652

Balaclava 200 made out of wool terry knit fabric. It has a single opening that can be configured to cover everything but the eyes. The lower edge of the opening can be pulled below the nose or the mouth for ventilation options.

ONE SIZE

Wrist Gaiter 200
Art no: 9672

Wrist gaiter with thumb hole, made from circular knit fabric with terry loops on the inside. It has the Woolpower logo knitted in. 18 cm long.

ONE SIZE

Belly Warmer 200
Art no: 9512

Belly warmer for pregnant women that has an elastic upper edge and no lengthwise seams. Made of Ullfrotté 200 with a smooth surface on the outside and terry loops on the inside.

ONE SIZE

Woolcare
Art. no 10500000

A Woolwash gentle to both the environment and your clothes. It contains no enzymes and only low impact renewable surfactants. The woolen garment will be clean and long lasting. It also contains the natural wool fat lanolin to protect the delicate fibres of wool.

500 ml = 20 washes.

Balaclava 400
Art no: 9654

Balaclava 400 has a single opening that can be configured to cover everything but the eyes. The lower edge of the opening can be pulled below the nose or the mouth for ventilation options. The neck is long for extra coverage.
