

Your entry into the 400-litre intermeshing mixer class

The new INTERMIX® IM400E

**HIGHER THROUGHPUT
BY UP TO 27 %***

with latest PES7
rotor technology

Enter the 400-litre intermeshing mixer class with the new INTERMIX® IM400E, the latest development in HF GROUP's E-series family. Evolution of the proven design of the intermeshing mixer, INTERMIX® IM320E, the new IM400E, equipped with latest PES7 rotor technology, provides a significant increase in throughput without compromising compound quality. Whether as a part of a new mixing line or as a replacement machine, the IM400E benefits from its 100% interchangeability with the IM320E and IMGK320E as well as from the use of the same auxiliary units. This simplifies standardisation, prevents time-consuming and costly changes to the layout of the mixing plant in brownfield projects, and thus facilitates capacity expansions.

Your benefits

- Throughput increase by up to 27%* due to higher empty volume plus higher fill factor
- PES7 rotors with faster material intake and higher energy efficiency for specific energy savings at same compound quality
- 100% interchangeability with installed IM320E and IMGK320E mixer base due to:
 - Identical hole pattern, water & hydraulic connections etc.
 - Same hydraulic units, lubrication pumps, TCUs etc.

*compared with IM320E with PES5 rotors
