

Optimising your final mixing process has never been so easy

Smart Final Mix as a Service

Maximise throughput of your final mixing line by using the digital guide service **Smart Final Mix**. It provides final mixing process optimisation in a fast, secure and efficient manner. In addition to decades of field experience in process engineering, the **Smart Final Mix** service combines algorithms as well as three distinct criteria for mixing quality, energy use and compound temperature. The service can be used without sharing sensitive recipe or raw material data.

Your benefits

- Increase efficiency due to reduced cycle time
- Reduce production costs of the compound
- Increase sustainability due to lower emissions
