
syntaccx® enables AI-native, no-code vision systems from synthetic data to real-world deployment. In minutes.

Create synthetic datasets

Generate **synthetic training images** from 3D models and **save >90% of data collection time**. Fast, scalable, and without real-world data collection.

Automated Labeling

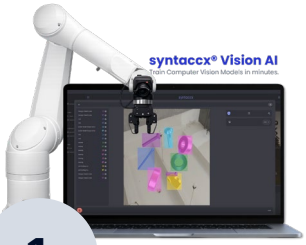
Every image is **automatically labeled** with precise annotations. No manual annotation and labeling required.

Train Vision Models

Train and **Fine tune** the **most performant vision models** on powerful infrastructure. Accurate, fast and efficient.

Deploy your Vision AI

Deploy your trained **vision models instantly** in the cloud or on-premise. Ready for real-world use cases.

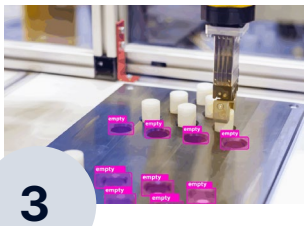


1 Building visual industrial Intelligence at scale

Create production data and turn it into **actionable intelligence**. **Scale** AI vision across **machines**, **lines**, and **sites** – from pilot to global rollout within one platform.

2 See what is happening on the shopfloor

Detect and **track** AMRs, forklifts, and assets in real time. Gain full visibility of material flow, movements, and bottlenecks on the shopfloor.



3 Enable Pick & Place tasks in minutes

Train robots to **recognize and grasp objects** instantly. No manual labeling. No complex setup. Just fast deployment.

4 Palletizing with visual intelligence

Identify **boxes, orientations,** and **stacking patterns** on pallets automatically. Increase throughput and reduce errors with AI-driven precision.

3 In-line AI Vision. Faster than your process.

Inspect, classify, and validate parts directly in production lines. Real-time decisions – **without slowing down your line**.
