### The right color in the window rebate

Salamander has four basic body colors: The main body can be seen in the window rebate. It is generally selected to match the inner lamination.

### Cleaning and service life

Window frames and sashes are exposed to the weather, pollen, exhaust fumes and other environmental influences. Depending on the location, increased UV radiation can also put additional strain on the material.

Decorative films not only give the window a high-quality look, but also require special care. Compared to white windows, they are more resistant to external influences.

The resistant surface protects against dripping wall paint or other stains. Traces of felt-tip pens, wax crayons etc. can be removed. For optimal and easy cleaning, we recommend our care sets.

★ **With matt\_cleanCOOL and COOLWood, profiles heat up less. This provides safety, especially with dark decors.**

Foils ensure dimensional stability. Less readjustment, better closing pressure leads to better long-term use.

★ **Longevity and value retention of the property.**

The high-quality workmanship and UV resistance of the decorative films ensure lasting color brilliance and weather resistance.

### These are the advantages of Salamander decorative films

★ **Normal soiling, e.g. from pollen or bird droppings, can be removed even more easily than before.**

Particularly easy cleaning of the surface for decades. During renovations, even paint or plaster can be removed very easily.

★ **Large design variety for individual design.**

With the wide selection of Salamander decorative films, everyone can find the design they want.

★ **COOL films deliver what they promise.**

Thanks to independent tests under extreme conditions, you can rely on durability and quality.

**Minimalism:**  
Clear surfaces and muted colors.

**Art Deco and late Art Nouveau:**  
Brass and metal in geometric patterns.

**Japandi:**  
Medium-dark wood tones with black accents.

**Scandi or Hygge:**  
White in combination with light-colored woods.

### Films add value

Decorative films not only look good. They can be used to design dream homes, extend the life of windows or – with the right décor – meet, for example, the conservation requirements of historic houses or enhance minimalist façades in a stylish way.

The goal: the building becomes more attractive and increases in value.

**Tip:** With realMaterial you can laminate exterior windows with real metal such as copper or aluminum.

Films and decors with added value

With the color system, Salamander offers different decors and colors on the inside and on the outside. The windows can therefore be laminated on one or both sides.

You can choose any combination of foils. We have the most popular finishes in stock on site.
