Ergo Click

safety harness

Description

The Ergo Click is the universal fall arrest harness for a wide range of applications – whether on aerial work platforms, during roofing work, or in the construction and related trades. It was specifically developed for situations requiring reliable fall protection during short-term work. Its ergonomic and user-friendly design allows for quick and comfortable donning, like a jacket – eliminating the need for cumbersome leg loops. The practical click system in the leg area ensures easy application and adjustment, making the Ergo Click particularly efficient and user-friendly. The harness is universally adjustable and can be individually adapted to all users up to a total weight of 130 kg. Thus, the Ergo Click combines safety, comfort, and functionality in a well-designed system.
