## CEN and CCE Italia strengthen their collaboration by signing a framework agreement for the long-term provision of light EPC and EPC management services

**Jesi/Montalto di Castro, 18<sup>th</sup> March 2026** – CEN, based in Montalto di Castro (Lazio), which provides services for the authorisation, construction and maintenance of photovoltaic plants, and CCE Italia, based in Jesi (Marche), which develops and realises photovoltaic, agrivoltaic and BESS solutions and is part of the international CCE Holding group, have consolidated their long-standing business relationship by signing a long-term framework agreement. The agreement confirms CEN as CCE Italia's privileged supplier for all the company's development and construction activities in Italy.

As well as providing CCE Italia with an even stronger operational arm for its projects, the agreement enables CEN to join forces with a partner with strong financial and managerial capacity, thanks to which it will be able to broaden and strengthen its services to take on even more valuable contracts.

“This agreement, which formalises a longstanding collaboration, not only enables us to accelerate the entire CCE Group's progress towards becoming an IPP, but also marks the first step towards building an ever-closer partnership, thanks to which CEN and CCE Italia will, in the near future, be able to jointly provide EPC management and TCM services to high-profile investors,” says Sandro Esposito, Managing Director of CCE Italia and CBO of CCE Holding.

“With this partnership, our company is really speeding up its growth,” says Claudio Coccozza, CEO of CEN. “This is a crucial step, not only for us but also for our local area: we have always been convinced that the true energy transition is one that generates wealth, opportunities and skills within the local area and for the local area, and deepening our partnership with CCE Italia is a unique opportunity to establish a comprehensive hub of expertise and services in the Montalto di Castro area.”

## About CCE Italia

CCE Italia, based in Jesi (Marche region, central Italy), is an integrated partner for companies, communities and local areas in the development and realisation of sustainable PV, agriPV and BESS energy projects across the entire value chain, guided by a clear international IPP vision and a solid internal operational expertise. Since 2017, CCE Italia has been successfully paving the way to a more sustainable future by developing and realising innovative ground-mounted utility scale PV systems, now complemented by battery storage systems and pioneering agriPV solutions tailored for the needs of farm businesses. Currently managing a 4 GW pipeline in Italy, since 2020 we contribute to the journey of the energy transition company CCE Holding towards the goal of becoming leading international IPP.

## About CEN

CEN, founded in 2010 in Montalto di Castro (Lazio, province of Viterbo), is a company providing comprehensive services for the development, permitting, construction and maintenance of photovoltaic plants, ranging from utility-scale projects to small and medium-sized installations. From its headquarters in Montalto di Castro, a privileged site for solar energy production, and thanks to the solid expertise network built up over time, CEN manages every stage of the project: from site scouting to permitting, from construction to the continuous monitoring of the plants. Among its ancillary services, O&M plays a central and strategic role: CEN provides constant performance and profitability monitoring, ensuring operational continuity, yield optimisation and long-term investment protection.
