

Simon|100

KEEP
FEELING

simon

WELCOME.

We would like to introduce you to:

Simon|100

The conventional switch
that can become a smart switch.

A CONVENTIONAL SWITCH,
BUT BETTER.

*The first switch
with a push mechanism,
designed
to be used with
your eyes closed.*

reddot award 2017

page 33

*The door to
the Simon iO universe.
The beginning of
everything.*

Usability.

An intuitive way to interact.

Simon 100 is designed to make it easy for people to interact with it.
So, it's the most intuitive, simple and comfortable system to use.

The first interface designed
to be used with your hand.

Thanks to their push activation, the rockers
always remain in the same position.

The matrix arrangement
of the rockers is more intuitive and easier to remember.

Perfect geometry.
The rockers stay aligned with each other and with the frame.

Play with light. Everything is possible.

The dimmer switch lets you customize the light according to the time of day and your needs, for enhanced visual comfort and energy savings.

USABILITY
Same usability in every dimmer.

COMPATIBILITY
Universal for all luminaire types

TRAILING & LEADING
PHASE CUT
DALI

PWM
LED STRIPS
1-10V

TOUCH SURFACE
Touch surface that allows you to adjust the desired light level by gently sliding your finger.

INVISIBLE TECHNOLOGY
The light indicator shows the dimming level before you turn on the light and while it's on.

Control natural light as you please.

The push mechanism for controlling blinds, awnings and curtains maintains the same compact format as the rest of the series with two interaction areas on the same rocker.

USABILITY

Design.

*Form and functionality:
the perfect combination.*

Stylish designs, distinctive colours and discreet but perfect finishes make you appreciate the beauty of simplicity again.

4 finishes

*Two colours: black and white.
Two textures: matt and gloss.*

Gloss.

Matt.

The matt finish improves touch perception, increasing the interface's usability even more, especially for dimmer switches.

Designs.

A design created with a single objective in mind: to make its functionality so intuitive that you can operate it with your eyes closed.

Vertical

Minimal and Kits

Matrix

Kits: Combinations that take on a new meaning.

Simon 100 was created to make your life easier. That's why it comes in convenient kits with various functions to meet your every need.

Solutions designed for every room.

BEDROOM KIT

Socket outlet + dimmer switch + USB charger

TV KIT

Socket outlet + HDMI + USB + TV + RJ45

Clean design.

By designing the product as a kit, we can avoid adding new product lines when new functions are added on later.

Pure innovation.

Simon 100 came after years of research to create a safer, more convenient installation through the innovation of our mechanisms.

Mechanism innovation

Establishing a new philosophy.

Simon 100 sought to revolutionise the world of switches, and takes a new, more logical approach. This search led to a device formulated to maximise usability and simplify installation.

How does the push technology work?

Terminal connection that's fast and safe.

The mechanisms use a 1-click terminal system, a revolution in terms of security, ease of installation and speed.

How does it work? 1 click, no wire stripping required.

50% less
installation time

Installation takes less than half the time because you don't need to strip the wire.

The live wire remains inside the mechanism, so there's no risk of stray wires causing electrical problems.

Mechanism innovation

The socket ensures safety.

The 100 range socket outlet is safer, more convenient and quicker to install than ever, thanks to its 1-click terminal connection technology with no wire stripping required.

The first socket outlet on the market with no wire stripping required.

The terminal is conveniently installed from one side and allows the wires to be installed one by one or three at a time.

50% less installation time

It is much safer to separate input and output wires in different holes.

The levers, which are large and easy to press, adapt to your finger.

The bridging or cutting happens on the other side. This enables better distribution of the wiring and makes it easier to install the socket in the box.

Making better use of space.

By rethinking every element of its installation, the new socket outlet design takes advantage of spaces and adapts to them automatically.

When the socket outlet is pressed against the frame-holder, the mechanism positions itself correctly.

The advanced positioning system of the terminals improves distribution of the wiring inside the box.

Plus, the new screw-less cover is more attractive, and allows for faster, easier assembly.

Mechanism innovation

Perfect alignment.

A single frame-holder supports all the elements to ensure perfect alignment.

Because of the common difficulty of aligning the mechanisms, Simon 100 launches the first unified frame-holder that holds 1, 2, 3 or 4 modules.

It allows both horizontal and vertical assembly.

Since it's a single structure it provides rigidity and saves time by being conveniently adjustable.

Plus, thanks to the fact that it supports all of the elements, it always looks perfect, with in-line rockers and uncomplicated assembly, even in irregular environments.

The non-return front clips can be unclipped one by one for easy removal.

New functions.

Dimmer switches.

With the dimmer switch, you can control lighting in any room, from anywhere.

Plus, it allows you to create several environments in one room, letting you live different experiences in a single place.

Benefits of light dimming.

Visual comfort.

Lighting needs aren't the same morning, afternoon and night. Lights don't always need to be at 100%.

Energy savings

Dim lights according to the level of natural light in the room. Using smart lighting reduces energy consumption.

The great compatibility of the dimmer switch range.

1. The same usability in all dimmer switches.

2. Universal for these technologies: Phase cut, DALI, 1-10 V and PWM.

3. Easy to install without extra elements.

And, with the Simon iO-connected version, you can control lighting from your phone.

Compatible with any luminaire type.

	Compatible dimmer switches	Compatible rockers*
Light bulb	2/3-wire phase cut	Dimmer switch rocker
LED Strip	For LED strip	
Downlight	1-10 V**	Dimmer switch rocker iO Simon
Modular luminaire	DALI**	

* Finishes in White (Gloss or Matt) and Black (Gloss or Matt)

** Depending on luminaire driver

USB Chargers.

- Simple installation, like a socket outlet.
- Easy to use: connect and charge.
- **Smart Charge** Technology

Charger types.

Socket outlet
with USB charger
Smart Charge

USB Charger
Smart Charge

Double USB charger

Smart Charge is a smart chip that makes the charger compatible with any type of device. This way, the charging process is safer, faster and more efficient.

*The entrance
to the universe.*

The beginning of everything.

Simon 100 is the first collection to integrate the Simon iO system and the first to enter the IoT universe. This lets you create connected spaces.

Connect all of your home's smart devices to create a world of unique experiences without modifying your installation.

A world that's compatible with voice assistants using your **Google Assistant** and **Amazon Alexa**, which has connected thousands of homes.

A conventional switch capable of turning your house into a smart home.

Imagine it, try it...and most of all, feel it. With Simon iO, you can turn your house into a smart home, **without requiring changes to the conventional installation, special wiring, complex programming or a new electrical box.**

Welcome

Have your house welcome you with all the blinds open and the lights on at the desired level, with just one rocker.

Everything off

Forget about spending 5 minutes making sure everything is closed. With a single rocker, you can lower all the blinds and turn off all the lights and heating at once.

Good morning

Lights and blinds that wake you up your way. So waking up every day can only be a pleasure.

Sweet dreams

ZZZzzzZZZzzz... You're feeling sleepy. Pressing just one rocker gets the lights, blinds and heating ready to spend the night however you like.

Cinema

Dim the lights and lower the blinds, the film is about to start. Quick, just press a simple rocker.

Presence simulation

Prevent break-ins by making burglars think you're at home.

Central blinds control

Simon iO lets you control all the blinds in your home with a single rocker.

Remote control

The garage door, a blind, the entryway light... controlled from wherever you want, whenever you want.

Control your consumption

Wake up all your devices from standby by pressing a single button. Control your consumption.

Hello home!

Simon iO lets you control all your devices with voice commands, because it's compatible with your **Google Assistant** and **Amazon Alexa**.

*Simon iO:
Everything you need to
dive in.*

How does Simon iO work?

And if you don't have Wi-Fi at home?

1. Hub Pro iO, the brain behind your iO installation.

Our first Hub, the Hub iO, has evolved into the Hub Pro iO. It stores all the information about your installation, devices, experience configurations and programming; and has a series of functions that weren't available before.

New Hub. New functionality:

Compatible with voice assistants:

The **Hub Pro iO** is compatible with voice assistants from **Google Assistant** and **Amazon Alexa**.

Increased power and security:

This lets you store all your home's information in the Hub Pro iO itself, so your data is more secure.

Compatibility:

Ready to use with any version of iOS or Android, and with future updates.

Multiple users:

Now you can give your partner or family access to your iO installation.

Multiple homes:

Control your house, office or second home from your mobile phone with the Simon iO App.

Multiple devices:

Control your installation from more than one device at the same time (mobile phones, tablets...).

Notifications:

With Hub Pro iO, you can receive notifications to help you day-to-day. The system can let you know what's happening in your home.

2. New Simon iO App.

Activate your experiences and control your iO mechanisms from inside or outside your home.

Available from:

1. Configuring devices and experiences.

The Simon iO App lets you easily and intuitively configure the whole new iO universe: from iO mechanisms to desired experiences. Experiences that you can change as many times as you want, because the process is truly simple.

2. Remote control.

Controlling lights, blinds and temperature from inside and outside the home, receiving notifications and programming schedules are all possible from the Simon iO app. Increase the functionality of your iO mechanisms, with the ability to configure soft light turn-on, dimming levels, beacon lights, delayed off and power control. In short, a world of possibilities that's now within arm's reach.

More functionality.

Multiple homes.

Add more than one iO house to your Simon iO app and use the app to control, for example, your holiday home or parents' home.

Global configurations.

Use them to create on and off ramps and easily turn on beacons, among other functions, in a group of iO mechanisms.

Multiple users.

Share your home's control with whoever you want. For all the configured designs and iO mechanisms.

Multiple devices.

Now you can log in from more than one device. If you don't have your mobile phone nearby, don't worry: use your tablet.

Notifications.

Let us tell you if the connection to your home has been lost, if a device has low battery, or any other type of information related to user management.

3. iO mechanisms, start creating.

Hub Pro iO

Simon iO App

We use our brains and the Simon iO app to configure this new universe, now all that's left to do is set up the smart mechanisms and start to create.

Simon iO mechanisms are connected and wired directly into the power source, allowing total control of your home.

iO Master Blinds, battery operated

iO mechanisms.

iO Dimmer Switch

Using the Simon iO app, you can control on and off ramps to improve visual comfort, schedule turn-on times, delay turn off and create custom experiences.

iO Blinds Switch

This mechanism, which is essential for home comfort, lets you control motorized blinds, awnings and curtains. And calibrate their raising and lowering times.

You can automate the control of all the blinds in your home with a Master Blinds Switch or control them individually if you prefer.

Using the Simon iO app, you can modify various features like raising and lowering times and centralization, and design and control experiences.

iO switch

This mechanism lets you control anything, including motors and lights... whatever you want.

Using the Simon iO app, you can schedule turn-on times to avoid unnecessary light use, or delay turning on and off.

iO socket

This connected socket lets you control the power use of all the devices connected to the socket outlet, whether it's a free-standing or table lamp, a TV, a gaming console, etc.

Using the Simon iO app, you can schedule turn-on times, limit consumption and control the beacon light level.

Thermostat

Your home's temperature has never been so under control. With this smart mechanism, you can control your heating system (water heater or underfloor heating system), whether it's central or localized. And you can do it from inside or outside your home.

There are two versions and 3 operating modes.

Versions

- Thermostat for water heater or water-based underfloor heating.
- Thermostat for electrical underfloor heating (includes temperature detector for floor).

3 operating modes

1. Manual.
2. Automatic.
3. Holidays.

Everything off switch for iO lighting (DIN rail)

Make your house an intelligent home, even with non-iO mechanisms.

This switch, which is installed in the electrical box, lets you turn off all the lights, even if they're not iO mechanisms, turn off devices connected to an outlet circuit and eliminate device standby.

It's easy to control. You can do it from the iO Simon app, from a Master switch, or include it in one of your experiences.

It's designed for mechanical mechanisms, so avoid connecting iO mechanisms (including the Hub Pro iO). It has auxiliary input for activation with a mechanical push-button switch.

4. Master Switches: Your wish is their command.

There are 3 types of iO Master Switches:

Start creating. These mechanisms let you activate your experiences with the simple touch of a rocker, and/or can be associated to a device to easily switch it on or off. This way, you can, for example, dim lights or control blinds from various points.

Complementary iO Master Switches:

Double iO Master Switch:

It's possible to activate two experiences from a single rocker with this new iO mechanism. And you can control up to 4 experiences from a single recessed box. Imagine how the possibilities multiply. Available for iO switches.

iO Master Switch, battery operated:

Available for iO Switch and iO Blinds Switch. With battery-operated iO Master Switches, you can add additional mechanisms without needing to change the installation or perform construction work.

For renovations: no electrical installation is required to extend my installation or create new experiences.

Flexibility: you can adapt and extend your installation without any type of wiring.

On any surface: ready to install on any surface, including the most elaborate (wood, glass...).

iO Master Switch

Once configured, iO Master devices will send wireless commands to the rest of the iO mechanisms, so they activate the experiences you've configured. All by pressing a single rocker.

And, since it's a flexible system, you can change the configured experiences whenever you want from the Simon iO App.

Plus, you can also use them as an additional control point and turn the power on or off from two mechanisms (iO 2-way switch).

iO Master Blinds Switch.

Make all the blinds go up or down at once, by pressing the Master Blinds Switch Rocker. This intelligent switch lets you centralize all the blinds or awnings that you want.

1. Central blinds control

2. Switching blinds.

It also lets you control a single blind from more than one location. For example, from both sides of the bed.

iO Master Dimmer Switch.

Dim the lights in your rooms from more than one location. From different parts of the living room, for example, or from both sides of the bed.
