Powerful protection for the day-to-day

When parquet faces tough challenges every day, it needs a surface that takes its endurance to the next level. That's why Bauwerk Parkett developed B-Resist: an exceptionally durable surface treatment for areas subject to heavy foot traffic, frequent cleaning, and intense use on a daily basis. Whether in public spaces or private homes, it reliably protects the wood against the visual signs of heavy use and preserves its natural character.

Advantages of the B-Resist surface:

Maximum durability

Intense foot traffic, castor chairs and other movable furniture often leave visible traces on heavily used floors. This outstandingly robust B-Resist surface is designed to withstand such stresses, helping avoid visible traces of use. It is perfect for both private and public areas that see large numbers of visitors.

High resistance features

Common household liquids, cleaning agents and other chemicals pose some of the more difficult challenges for wooden surfaces. B-Resist withstands these stresses with ease and is also suited for areas where floors are subjected to professional cleaning or higher-intensity use.

Top-class for wear

B-Resist meets the requirements of Wear Class 33, which is the highest class for heavily used commercial spaces. This means that the surface has been verifiably tested for challenging applications and that it combines high durability with Bauwerk Parkett's quality standards for healthy living.

Long-term value

When parquet has to withstand heavy use, quality really pays off over the years. It can reduce the need for renovation and replacements, presenting a long-lasting solution that is also impressively economical.

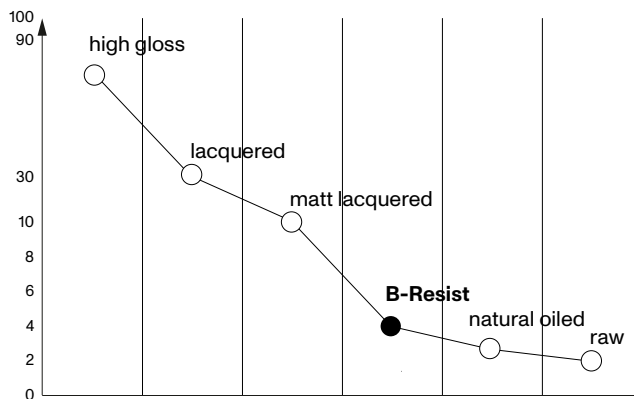

Technical information

Very natural, matt look

Compared to other lacquer surfaces on the market, B-Resist has an extremely low level of gloss, which results in a matt, natural look.

Gloss Units [GU]

Tested resistance to chemicals

B-Resist has undergone chemical resistance testing under standard conditions, verifying its ability to withstand cleaning agents, sanitisers, coffee and other liquids. This meant applying the test chemicals to the surface in a controlled manner and then assessing whether they left any visible traces or affected the coating in other ways. The highest Class C rating according to the ÖNORM 2354 standard confirms B-Resist's outstanding robustness when exposed to liquid chemicals, thus meeting an important requirement for parquet flooring in high-traffic areas.

Prolonged stress by castor chairs

Rolling furniture movement is particularly demanding for parquet as it tends to repeatedly affect the same individual points and areas of the floor over a long period of time. In order to bring this use scenario as close to reality as possible, B-Resist underwent a castor chair test, with soft wheels completing more than 25,000 cycles over the surface. The result of the testing demonstrates B-Resist's top suitability for intensively used spaces where parquet is expected to last a long time.

Colours & formats

B-Resist is available in the following colours and formats:

Cleverpark 1250 and Cleverpark 900

Oak Nature
Surface: B-Resist
Grading: 14*, 34

Grading 14: very calm
Grading 34: lively
* without sapwood

1250 x 100 x 9.5 mm
900 x 100 x 9.5 mm

Bauwerk Parkett – Built for a lifetime

What began in 1935 with the invention of solid parquet by Swiss pioneer Ernst Göhner, sets new standards for ambitious design and healthy living today. Just like every tree and every piece of wood, each of our responsibly manufactured planks is sustainable and unique. A fusion of Swiss engineering and authentic nature results in extraordinary living experiences: today, and for future generations. bauwerk-parkett.com
