The warmth of home,
the care of industry.

At Copreci, we transform gas energy into innovative and safe solutions that seek the comfort of our customers. Our extensive range of products combines cutting-edge technology, sustainable design and unparalleled reliability; this is confirmed by the more than one billion gas systems sold worldwide. Discover our reliability coupled with our ability to adapt to different products and markets with all our gas solutions.

Gas cooking solutions Free-standing.

At Copreci, we offer a wide range of components and systems designed to guarantee superior performance in gas cookers.

We design solutions that combine safety, innovation and durability, adapting to the demands of manufacturers and the needs of the end user.

With innovative designs and concepts, we control gas technology. That's why we offer our customers a wide range of systems.

At Copreci, we offer a wide range of components and systems designed to guarantee superior performance in gas cookers.

We design solutions that combine safety, innovation and durability, adapting to the demands of manufacturers and the needs of the end user.

With innovative designs and concepts, we control gas technology. That's why we offer our customers a wide range of systems.

Solutions for professional cooking.

Since 1963, Copreci has led the way in the design of components for the hospitality sector, developing more than 50 specific products for professional gas equipment such as griddles, fryers, stoves, and ovens, for example. With a focus on speed and flexibility, our innovation department creates customised solutions, offering tailor-made technology for our

customers and the changing needs of the hospitality sector.

Copreci also offers comprehensive solutions for digitising your appliances so that you can integrate new functions such as the ability to repeat cooking processes and recipes, which can then be reproduced over time, programming of appliances, and even controlling

them remotely. We can even talk about connectivity between devices, for which we have to go through the process of digitising them.

Digitisation is linked to competitiveness, and Copreci is your partner in designing new business models. What are you waiting for? Give us a call, and we'll tell you how we can digitise your application.

HMIs, LCD screens, handles, buttons, etc.

Copreci also offers comprehensive solutions for **digitising your appliances** so that you can integrate new functions such as the ability to repeat cooking processes and recipes, which can then be

reproduced over time, programming of appliances, and even controlling them remotely. We can even talk about connectivity between devices, for which we have to go through the process of digitising them.

Digitisation is linked to **competitiveness, sustainability and safety**. Copreci is your partner in designing new business models. What are you waiting for? Give us a call, and we'll tell you how we can digitise your application.

Solutions for outdoor cooking.

At Copreci, we transform the possibilities of the outdoor sector by integrating traditional valve solutions with electronic controls that are unique in the market.

We create remote-controlled barbecues with illuminated handles that indicate an active flame, and we even incorporate systems designed for the safety of the whole family.

One example is Magic Button, the intelligent system developed by Copreci that turns your traditional gas BBQ into a Smart Grill.

Solutions for home comfort.

We develop heating solutions that prioritise comfort, safety and aesthetics, while reducing costs and committing to sustainability. Our experience allows us to offer

the most advanced range on the market, perfectly adapted to the needs of modern households and the expectations of customers. With these two lines of activity:

Electronics: New technology for communication between user and device.

Electromagnetism: Components for classic heaters: catalytic, infrared, blue flame, etc.
