Established from
the beginning,
reaching you today.

Since becoming one of the first independent induction manufacturers in Europe over 30 years ago, Copreci has led the way in innovation with the development of 11 generations of induction that combine efficiency, reliability and sustainability.

Our commitment to the end user is reflected in the incorporation of more intuitive controls and features that prioritise convenience and safety, facilitating the end user's cooking experience. We also design with the future in mind, with more flexible, sustainable and economically optimised solutions to meet the demands of a constantly evolving market.

A different platform for every need.

Competitive and flexible.

Customised solutions ranging from built-in or free-standing worktops, with different widths, spotlight configurations and adapted to the different markets in Europe, America, Asia, etc., allowing solutions to be built for every need from entry level to high-end, including the mid-range.

7G

Unbeatable solution combining competitiveness and performance with a wide range of variants.

7G+

A new generation with a perfect balance for new market trends that demand performance without compromising competitiveness.

GF10

Power, performance and connectivity integrated into our premium platform.

11G

Modular solutions with flexi zones to respond to any need.

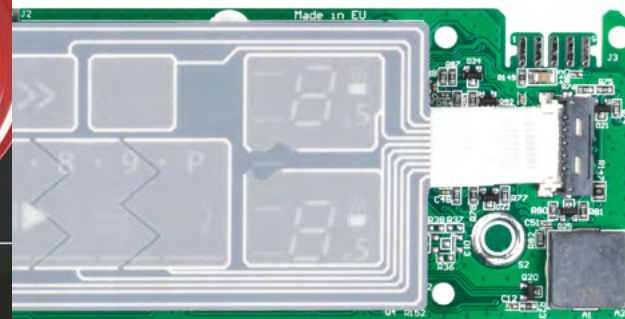

Advanced user interface, for all tastes.

We offer different types of controls, from the extra-long slider touch control to solutions based on customisable capacitive membranes, with TFT screens or even rotary controls... there's no shortage of ways to interact with the appliances.

We offer our customers the option of customising the controls, always looking for attractive and easy-to-use options for the end user.

More for less.

We have tried to reduce the height of our induction hobs as much as possible, to maximise space and facilitate installation in line with the latest kitchen trends.

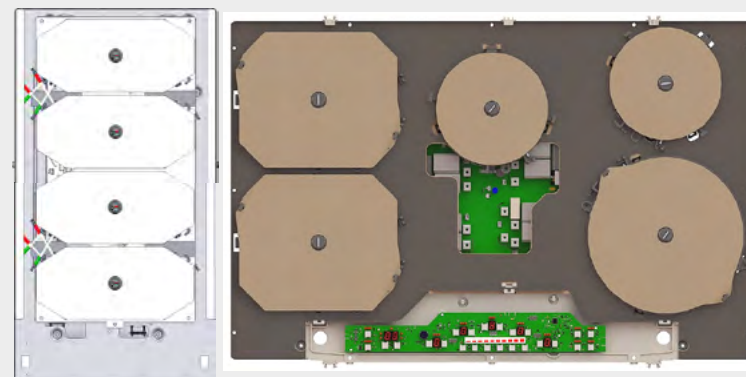

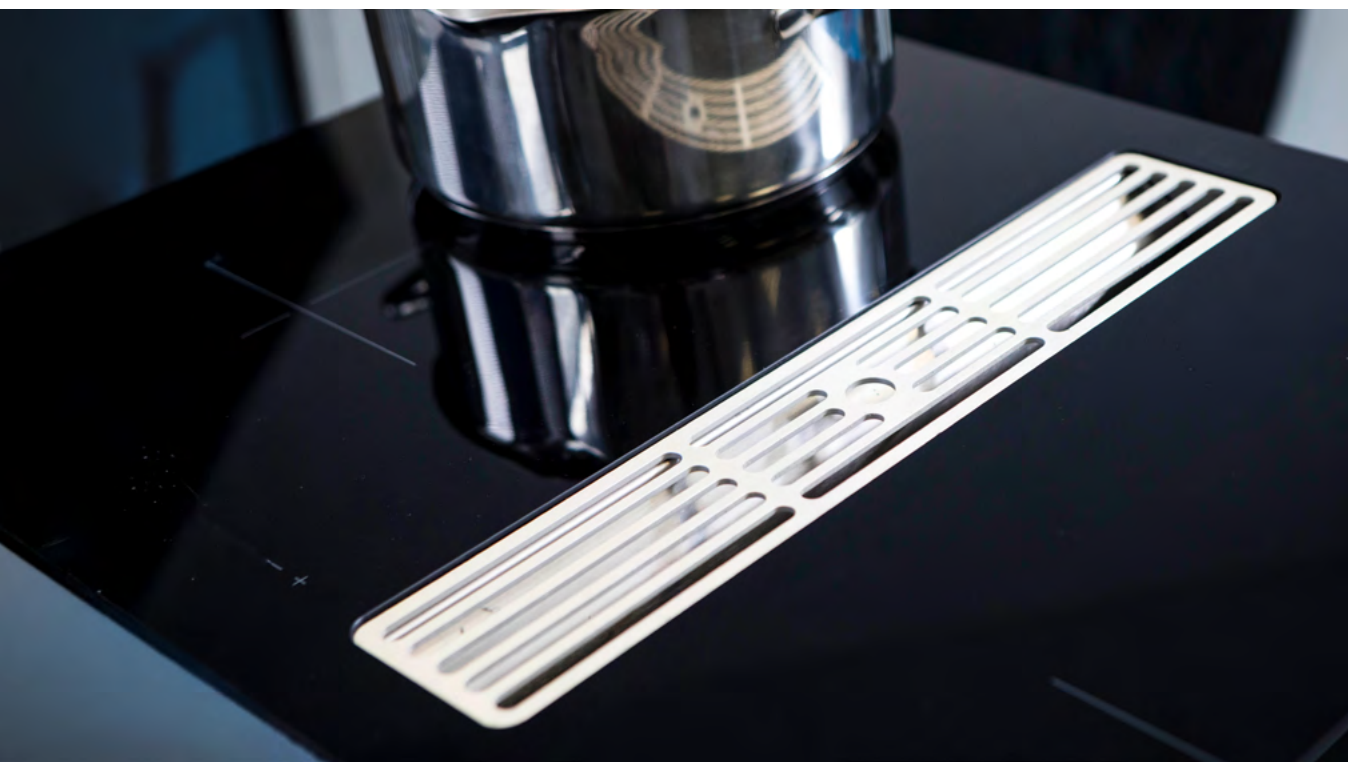

Experts in solutions with built-in hoods.

We help our customers to develop built-in hood (extractor-hob) solutions for different market segments, with spotlight configurations and interfaces tailored to each customer.

At Copreci we always have a solution for our customers that suits their needs.

Adaptable sizes and configurations.

Tell me what size you need and we're sure to have a solution for your market... from 30 cm, through to 60, 80 and 90 cm, with configurations of 1, 2, 3, 4, 5 and 6 cooking zones, flexi zones, with solutions designed for different markets, what more could you want?

Cooking functions.

At Copreci we have analysed the most common ways of cooking with induction and transformed them into 3 automatic functions to make the cooking experience easier and more convenient.

Functions that help you discover the chef within you.

Boil

Fry

Grill

And what's more, our induction hobs are intelligent.

We offer intelligent connectivity compatible with Wi-Fi and Bluetooth to communicate with:

H2H Hoods

Hob to hood.

The cloud

CCP - Copreci Cloud platform.

We are experts in integrating our solutions into our customers' cloud ecosystems.

Our induction hobs guarantee a cooking experience that allows speed, safety and simplicity in cooking through our automatic cooking functions... You can no longer say that cooking is difficult.

Making the everyday
things extraordinary.
