

Robopack and SoftwareCentral Merge to Form Robopack Group

Updates

Published Apr 8, 2026

One partner for the full Microsoft Intune Lifecycle

Copenhagen, Denmark – April 8, 2026 – [Robopack](#) and SoftwareCentral are merging to form Robopack Group, bringing together two category leaders in the Microsoft Intune ecosystem. The merger brings together two companies covering the full Intune lifecycle, from packaging and patching to tenant management and governance, under a single platform, development team, and customer relationship.

The combined portfolio includes Robopack (packaging and patching for Intune), [Tenant Manager](#) (multi-tenant Microsoft 365 management) and SoftwareCentral (on-premises endpoint management). Together, these products give organizations one partner for every stage of managing and securing their Microsoft environment.

Both companies have operated in close partnership for years. The merger formalizes and deepens that relationship, consolidating infrastructure, security controls, and development resources to accelerate product delivery and reduce complexity for customers.

“Robopack and SoftwareCentral have worked closely together for years, and this merger is the natural next step. By bringing our teams and technologies fully together, we can deliver something neither of us could alone: a single platform, a single team, and a relationship

customers can rely on completely. We are building the definitive Intune partner for organizations that want their Microsoft environment managed and secured without complexity.” — Andreas Spiegelhauer, CEO

Existing customers and partners will be contacted directly by our customer success team. No action is required from your side.
