- Built in socket (6 point) and wrench
- Socket sizes 7, 8, 9, 10, 11, 12mm
- 1.2M silicon hose with check valve
- Ideal for bleeding brake and hydraulic clutch systems

These specialist brake bleeder wrenches are designed to simplify brake bleeding and the additional ease of access will in many cases let the operator bleed the brakes without removing the road wheels. Clean and lubricate the bleed valve then fit the wrench over it; the wrench's internal seal and built-in socket fits snugly over the valve. The bleed tube is then fitted onto the nipple that is built into the wrench. Thus the wrench can be turned and repositioned without any fear of dragging against the bleed tube, or separating the bleed tube from the valve. Six sizes of wrench are supplied in the set, to cover most popular applications: 7-8-9-10-11-12mm all color-coded for easy identification. Ideal for both brake and clutch hydraulic systems, the wrench set is supplied in a sturdy blow-mould case with internal foam to keep the wrenches and tube secure and tidy.

FORD

829095 - HIGH PRESSURE FUEL PUMP PULLER DIESEL FORD - TDCI - TRANSIT 2.2

As of 2011 Ford changed the method of fuel pump sprocket removal on the 2.2 TDCI (Puma) diesel engines. The sprocket no longer has threaded holes which means the legs of the puller used to remove the sprocket must be hooked in shape. The K00286 puller allows the removal of these sprockets by allowing the high pressure diesel injection pump to be pushed out of the pump sprocket to enable pump removal without disturbing the timing chain. Special note: To perform this task the 829095 must be used with Ford special tool 303-1151 (sprocket holding tool).

Note: The 829095 kit contains a force screw. Force screws must be lubricated with high pressure grease. Sonic recommends the use of molybdenum disulphide grease (drive shaft grease). Do not use assembly or anti-seize greases (copper greases).

MERCEDES

829124 - TIMING CHAIN FITTING BRIDGE - MERCEDEZ BENZ

The Mercedes-Benz M651 1.8 | 2.1 diesel engines can suffer from issues requiring the replacement of the timing chain. The M651 timing chain is at the back of the engine (flywheel end) which makes the replacement of the timing chain difficult. To avoid the need for completely stripping the engine the new chain must be attached to the old chain and "threaded" around the engine sprockets while turning the crankshaft. The 829124 Timing Chain Fitting Bridge helps guide the new chain into position while the old chain is extracted by maintaining the contact of the new chain with the sprocket. Note: the 829124 must be used with the cam locking tools found in 829120 M651 engine timing kits.

829122 - VIBRATION DAMPER HOLDING TOOL - 1,8/2,0 TFSI/TSI

A comprehensive kit used for dismantling and assembling the vibration damper on the applications listed. The vibration damper fitted to the VAG 1.8 | 2.0 TFSI | TSI engines is held in place by a single central bolt. The pulley clamps the crankshaft timing chain sprocket against the end of the crankshaft, there is no traditional key way and the sprocket is not supported by the crankshaft. If the pulley bolt is removed without using the 829122 the crankshaft chain sprocket can easily separate from the crankshaft causing the timing position to be lost. The 829122 is an essential kit required to maintain the engine timing when removing the front vibration damper and should be used whenever the vibration damper is removed for instance when replacing the front crankshaft oil seal. N.B. for replacement of the camshaft drive chain additional tooling will be required - see Sonic Equipment 829066 Engine Timing Kit. The 829122 can also be used on earlier engines as the VW tool T10531 replaces the older tool T10368.
