

## **Icelandic Pósturinn relies on KePol lockers to offer 24/7 parcel services**

Pósturinn, the national postal service organization of Iceland has chosen KEBA AG as the preferred partner and supplier for scaling-up their parcel locker network across the country.

### **Unique reliability and TCO as the decisive factors**

KEBA AG was selected among all bidders due to the lowest TCO (total cost of ownership) that her KePol parcel locker solution offers. Furthermore, KEBA's vast experience and references in countries with harsh environments such as those located in Northern Europe were determining factors. The contract scope includes the supply of 30 rugged KePol FS-09 outdoor lockers running the latest version of the KePol Software Suite as well as the required IT infrastructure and service & support.

### **Improved convenience for Pósturinn's customers**

Pósturinn now can offer an innovative and convenient 24/7 parcel service available throughout the whole year. Customers benefit from the great flexibility to pick up and drop off their parcels whenever they want. The dependence of limiting post office opening hours becomes a thing of the past.

### **Future-proof investment**

In addition, the modularity and scalability of the KePol system makes it future-proof. When required, it enables Pósturinn to offer additional services such as the integration of the parcel locker network with local web shops and other logistic companies. This turns the system in a truly carrier agnostic parcel network.

### **Contactless deliveries – best safety**

Not only in difficult times of fighting the Covid-19 virus and its impact on the people and their social lives, KePol parcel lockers provide best protection against a transmission of viruses. They allow deliveries to be contactless as they are asynchronous. The persons involved have no direct, personal contact. Any risk of infection is practically excluded.

In addition, this type of goods transfer relieves system-critical infrastructure such as postal services, delivery services and logistics companies and their delivery staff, who are generally exposed to an increased risk of infection.

### **Environmental-friendly and time-saving**

With this sustainable investment, Pósturinn will reduce its carbon footprint and help to preserve the natural beauty of Iceland. Thanks to KePol parcel lockers each delivery attempt is successful, a second one no longer is necessary. This saves time and results in an environmental-friendly reduction of driven kilometers and subsequently in less emissions of greenhouse gases.

Finally, Pósturinn as new reference highlights KEBA's position as the most sustainable and experienced supplier of parcel locker solutions and as market leader in Europe.

### **About KePol Parcel Logistics Automation**

Already since 2000, the KePol parcel lockers from the Austrian innovation leader KEBA provide the easy automation of the first and last mile of parcel logistics processes. First-class quality and outstanding reliability make KePol the world's best locker solution. The modular system enables maximum flexibility and makes customizing easy – both in hardware and in software. KePol lockers are safe and rugged. They withstand hardest weather and environmental conditions and can be installed indoors and outside as well.

Postal organizations and logisticians as well as their customers benefit from a 24/7 available and user-friendly parcel pick-up, drop-off and returns. Thanks to the KePol lockers, failed delivery attempts are now a thing of the past. The benefits are increased delivery efficiency, reduced costs as well as a lowered carbon footprint.
