KEBA[®]
Automation by innovation.

SECURITY

for your foyer

Whenever money is involved, security plays a particularly important role. This is especially true for 24/7-hour self-service foyers, where your customers enjoy self-service transactions around the clock.

Whether cash deposit or withdrawal, bank transfer or currency exchange: the perceived security of your customers has a direct effect on the usage rate and therefore on the efficiency of your self-service machines - even and especially in unoccupied branches.

KeBin S10, KEBA's smart foyer and access management system, reliably controls the access to your self-service zone and offers your customers maximum security.

Customers who feel safe and sound
in your branch, **will return with pleasure.**

**Data protection for your customers:
KeBin S10 processes personal data
GDPR-compliant**

Safe technology, state-of-the-art design

The clear design of the KeBin S10 blends perfectly into almost any façade design and harmonizes with any architecture - whether historic building or modern architecture. The high-quality glass front not only protects against dirt but also against skimming attacks. Skimming superstructures can be immediately detected as foreign objects, making KEBA's access and foyer management system unappealing for criminals.

Thanks to integrated manipulation protection, the KeBin S10 reliably detects (attempted) disassemblies of the door module and pauses the operation. The data of your customers is also secure: personal data is transmitted in encrypted form following the General Data Protection Regulation (GDPR). The data is not processed at the door module but securely in the central unit in your server room.

Transparency in the event of damage: If necessary, the data can be viewed by authorized staff to clarify irregularities. The encrypted card data can be integrated into your video surveillance system both serially and over the network.

HIGHEST OPERATING COMFORT

for all users

The simple design of the KeBin S10 is clearly structured and therefore intuitively understandable. The audio-visual user guidance with icons, integrated LEDs and audio feedback ensures easy operation.

All modern authentication options are available to your customers: magnetic strip, chip or contactless thanks to NFC technology. The contactless function enables visually impaired people, in particular, to authenticate at the door module quickly and easily.

The KeBin S10 supports barrier-free access to your foyer. If the KeBin S10 cannot be mounted on the building facade, the optional pedestal guarantees an installation in which the operating heights are adapted to the needs of wheelchair users.

Safe for tomorrow's world

The sum of state-of-the-art technology, timeless design and innovative strength makes the KeBin S10 an economically secure solution: full investment security included. Thanks to best-in-class technology and highly available industrial components, KEBA's access management system is more powerful than ever before.

With the KeBin S10, you are ideally prepared for future requirements. The central unit can be retrofitted at any time with additional slots for other applications that are still unknown today.

Easy installation and minimal service costs

For your employees, the smooth installation of new systems and the straight forward replacement of old systems is easy to handle. The KeBin S10 is therefore quickly ready for operation in your branch.

All activities required for operation can be carried out by you and your employees. In the event of a malfunction, detailed information can quickly be retrieved remotely. Service costs are therefore significantly minimized - with the corresponding network connection of the KeBin system.

The door module of the previous generation can be easily exchanged with that of the KeBin S10

KeBin S10 can be controlled easily and conveniently via the clearly structured web interface in the browser. A customizable dashboard on the start screen shows all the information at a glance which is particularly relevant for you. This helps you keep an overview.

Thanks to the network connection, the smart foyer management system can be conveniently controlled from the office. Access authorizations and access times can be configured easily and uncomplicatedly - even remotely.

SMART CONTROL, easy to operate

Access authorizations and opening hours can be easily managed in the user-friendly web interface

Comprehensive logging ensures traceable accesses. Your branch staff can use the integrated calendar function not only to choose weekday-specific opening times but also to conveniently manage special opening hours in advance, e.g. due to a city festival.

An event is only intended for a specific customer group? The KeBin S10 makes it possible to compile different customer groups with different access authorizations. This allows you to control which customers have access to your self-service foyer and when.

Thanks to intelligent IoT interfaces, you can control room elements such as lighting with the KeBin S10 as well. If, for example, your customer is recognized as an authorized person at the door during authentication, the light switches on automatically after 6 pm. Background music or advertising can also be activated. KeBin S10 therefore creates a pleasant and friendly atmosphere for your customers even in unoccupied branches.

Fit for the future with KEBA.

Founded in 1968, KEBA AG is an internationally successful electronics company based in Linz/Austria with subsidiaries around the world.

In line with its credo, "Automation by innovation", KEBA has been developing and producing inventive, top-quality automation solutions for 50 years for industrial, banking, services and energy automation branches. Indeed, as a result of competence, experience and courage, KEBA is the technology and innovation leader in its market segments. Extensive development and production expertise represents a guarantee for the highest quality.
