

## C04.1 Option 2 – Custom Survey

### Technical Document

WELL Building Standard™ version 2 (WELL v2™), , Q4 2022 addenda

#### HOW TO USE THIS DOCUMENT:

This document is intended to serve as a guide on how to create a project technical document to support evaluation of the experience and self-reported health and well-being of building users through occupant surveys.

This document is meant to demonstrate an acceptable degree of detail for

- precertification documentation submission
- documentation submission.

#### ***For precertification documentation submission:***

To achieve WELL Precertification, project teams may submit intent-stage or implementation-stage documents for pursued features, or any combination of the two. An intent-stage document is typically a draft document that has not yet been implemented in the actual project, while implementation-stage documents describe final and implemented strategies. Intent and implementation-stage documents should be similar in terms of level of detail. For final WELL Certification documentation approval, all documents are required to be implementation -stage. To learn more about intent-stage vs. implementation-stage documentation, review the [precertification guide](#) in our knowledge base.

Intent-stage language is indicated in this sample document with **green text and in parentheses**. For an intent-stage technical document, the survey does not need to be final. This document cannot simply state that the feature requirements will be implemented; the documentation should include adequate detail such that a WELL Reviewer will be able to confirm the document complies with all of the WELL feature part requirements.

#### ***For documentation submission:***

The level of detail is up to the discretion of the project team, but the documents must include specific details demonstrating that the actual requirements have been enacted in the project boundary. The Feature cannot be demonstrated solely through a confirmation that the requirements have been or will be implemented.

This document and similar tools are intended to assist projects in their pursuit of WELL v2 but use of this document and/or similar tools are in no way a guarantee of achievement of any rating, certification or other designation, and no representation or warranty is made regarding the likelihood of achieving any rating, certification or other designation, , and IWBI shall have no liability resulting from the use or content of this document or similar tools or resources or from any action taken or inaction occurring in reliance on this document or similar tools or resources.

Note: The below document is based on the Q4 2022 addenda of the WELL Building Standard™ version 2 (WELL v2™). Project teams are required to implement the feature requirements from the addenda version assigned to their project or any more recent addenda version.

## FEATURE PART REQUIREMENTS:

*For projects with ten or more eligible employees, the following requirement is met:*

- 1. A survey is created that covers the topics listed in Appendix C1.*
  - 1. General building and occupancy information, including job type or time spent in the building.*
  - 2. Indoor environmental quality of air, water, light, sound and thermal comfort.*
  - 3. Ergonomics, layout and aesthetics.*
  - 4. Maintenance and cleanliness.*
  - 5. Amenities: access to nature, views and nourishment options.*
  - 6. Satisfaction with how policies and amenities impact and support healthy behaviors (e.g., physical activity, healthy eating).*
  - 7. Access to and engagement with workplace wellness initiatives or offerings (e.g., physical activity incentive programs, health benefits and services).*
  - 8. Employee support policies (e.g., paid parental and family leave, flexible working arrangements).*
  - 9. Productivity and engagement (e.g., through measures of hours worked or motivation).*
  - 10. Self-rated health and well-being.*
  - 11. Standard sociodemographic information (age and gender at minimum).*

### WELL Core Guidance:

Meet these requirements for direct staff.

The below sample documentation is intended to provide guidance in creating a custom survey technical document. It is not a template. You may note included components that are not required to demonstrate compliance with this Feature.

### Example document for Feature Part 1 Option 2

#### **Instructions for creation of a custom survey (to submit as a technical document)**

To achieve C04.1 Option 2, a final draft of a custom survey must be provided for documentation (*intent-stage: draft of survey does not have to be final*). Here are example steps to draft this survey:

1. Determine the most qualified person to draft the survey. This might be a person on staff with survey writing experience, a consultant, a human resources expert, etc.
2. Draft “introductory language” for the survey. This typically will include (note the items below are best practices, they are not meant to indicate a required list of items):
  - a. The name of the entity giving the survey (e.g. name of company)
  - b. Confirmation that surveys are anonymous and private.
  - c. Directions on how to fill out and return the survey.
  - d. Information on when surveys are due.
  - e. An estimate of how long it will take to fill out the survey (e.g. “no more than 10 minutes”).
  - f. The reason for the survey (e.g. WELL Certification and health and well-being feedback to help inform improving project functionality).
  - g. How results will be analyzed and how feedback will be incorporated into the project (e.g. if surveys indicate that temperatures are too cold or hot throughout a certain area, that facilities staff will inspect the systems and make adjustments to correct the thermal comfort issue.)
  - h. How often the surveys will be administered.
  - i. Contact person for any questions, clarification, or concerns about the survey.
  - j. Information about incentives if applicable.
  - k. Statement on importance of survey.
  - l. Statement on how the survey results will be used.
3. Select a format. Here are best practices for formatting:
  - a. Ensure that font is easy to read and not too small.
  - b. If surveys call for handwritten responses, make sure that there is a large enough (“comfortable”) amount of space for a person to write a response.
  - c. Make sure that it is always clearly indicated next to each question how to respond (e.g. “circle” Yes or No).
4. Draft questions. Here are best practices for drafting questions:
  - a. Make sure that there are questions that cover the following 11 categories listed in Appendix C1. When submitting the survey as part of WELL documentation, indicate which questions cover each topic (e.g. Questions 5-9 cover “Ergonomics, layout and aesthetics”).
    - i. General building and occupancy information, including job type or time spent in the building.
    - ii. Indoor environmental quality of air, water, light, sound and thermal comfort.
    - iii. Ergonomics, layout and aesthetics.
    - iv. Maintenance and cleanliness.
    - v. Amenities: access to nature, views and nourishment options.
    - vi. Satisfaction with how policies and amenities impact and support healthy behaviors (e.g., physical activity, healthy eating).
    - vii. Access to and engagement with workplace wellness initiatives or offerings (e.g., physical activity incentive programs, health benefits and services).

- viii. Employee support policies (e.g., paid parental and family leave, flexible working arrangements).
- ix. Productivity and engagement (e.g., through measures of hours worked or motivation).
- x. Self-rated health and well-being.
- xi. Standard sociodemographic information (age and gender at minimum).

It is acceptable if the survey covers additional topics that the project is interested in gaining feedback on, beyond what is required by the WELL feature.

- b. Make sure that each question is clear, concise, uses a neutral tone, and sets up the person taking the survey to give a clear answer. For example:
  - i. Clear concise question: Is the temperature at your desk on a typical day (please circle one):
    - 1. Too hot
    - 2. Somewhat hot
    - 3. Acceptable
    - 4. Somewhat cold
    - 5. Too cold
  - ii. Unclear question: List how you feel about the relative temperature on any day at your desk:  
\_\_\_\_\_.
- c. Make sure that listed survey answer options are distinct, clear and will cover the anticipated range of potential responses (e.g. “Satisfied” / “Unsatisfied” / “Not applicable” instead of “I love this” / “Everything is perfect”.)
- d. Provide general definitions if concepts covered are not widely known or complex in nature..
- e. Ensure that survey questions are designed with the future steps of collection and data analysis taken into consideration. For example, an online survey with multiple choice answers that auto-tallies results and generates charts will likely provide relatively easy to analyze data automatically. On the other hand, a survey where occupants must hand-write in answers require a number of hours of work to produce data from and the data may be subject to human error.

#### TIPS FOR MULTIPLE LOCATIONS

- For organizations participating in WELL at scale, this technical document is categorized as Shareable. It may be shared across multiple projects, as long as they all meet the strategies that are outlined in the document.
