

Armorblox is a cloud-native email security platform that protects against targeted attacks such as business email compromise, account takeover, and executive impersonation. The Armorblox detection engine leverages a broad spectrum of signals and techniques to analyze user identity, behavior, and language. Armorblox also prevents outbound data loss to help organizations stay compliant.

Armorblox Use Cases

Stop Targeted Inbound
Email Attacks

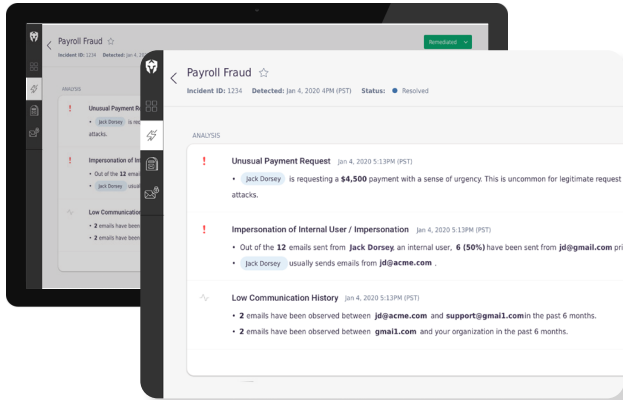

Prevent Outbound
Data Loss

Automate Abuse
Mailbox Remediation

Armorblox Product Capabilities

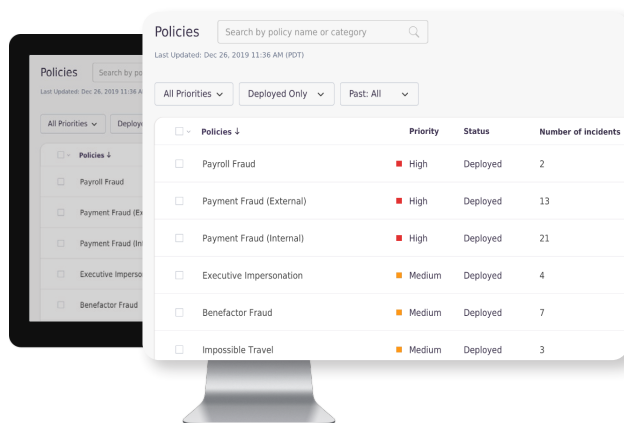

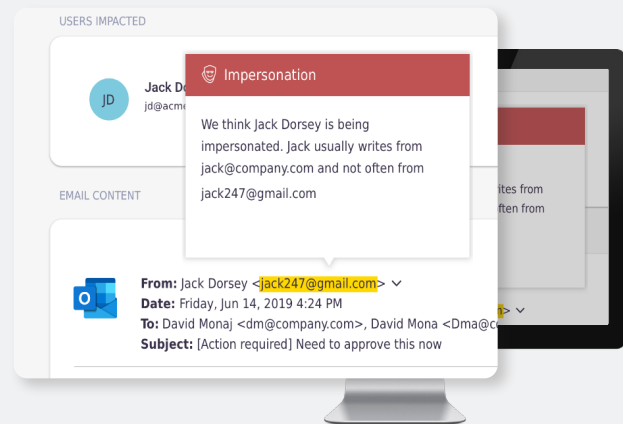

Email Attack Analysis

Study email-specific analysis that's built for human eyes. Know exactly why an attack was remediated without wasting time on manual, repetitive investigation.

Explainable Insights

Learn more about attacks with highlights and feedback within email content and metadata. Remediate laser targeted attacks with confidence and accuracy.

Preconfigured Policies

Deploy out-of-the-box policies that automatically block, quarantine, and label suspicious emails. Leverage continuously updated policies as attacks evolve over time.

Armorblox is a cloud-native and content-aware email security platform that protects against targeted attacks such as business email compromise, account takeover, and executive impersonation. Organizations use Armorblox to deploy pre-configured policies that block suspicious emails, automate abuse mailbox remediation, and prevent outbound data loss.
