

Security Powered by Understanding

OVERVIEW

SUMMARY

Secure communications across your enterprise

SOLUTIONS

Email security

Protect against phishing, spear phishing, ransomware, and social engineering attacks.

Data protection

Identify when data is accidentally or purposefully being improperly shared

Insider threat management

Get alerts when insiders are abusing their access to company data

With employees communicating through emails and documents on a daily basis, people-hacking has become the top attack vector for stealing data. Hackers are bypassing traditional metadata-based email security solutions through social engineering. It is also easy for employees to make mistakes, such as sending a sensitive document to the wrong person.

As a result, employees have become the weakest point in securing the enterprise. Sophisticated attacks exploit basic human nature with social engineering and phishing. From emails intended to deceive naive users to plain-vanilla data-theft, attackers are getting through by targeting employees.

Armorblox brings understanding to security to address security's weakest link: the human layer.

Using the latest advances in Natural Language Understanding (NLU) and Deep Learning, Armorblox can intelligently process and reason about textual communications to protect employees as they communicate and share data.

The Armorblox platform provides:

1. A natural language engine that derives new insights from enterprise communications and data.
2. Automated policy recommendations by learning what is important for the organization.
3. An alert remediation framework that distributes context-sensitive alerts to the relevant users, saving time for the security team.

94%
of all attacks
start via email

Product Features

Detect

Classify content across folders
Search and find indexed content
Detect PII/PCI violations

Analyze

Content creation patterns
Monitor workflows

Protect

Restrict content sharing
Redact/Expire data

Learn

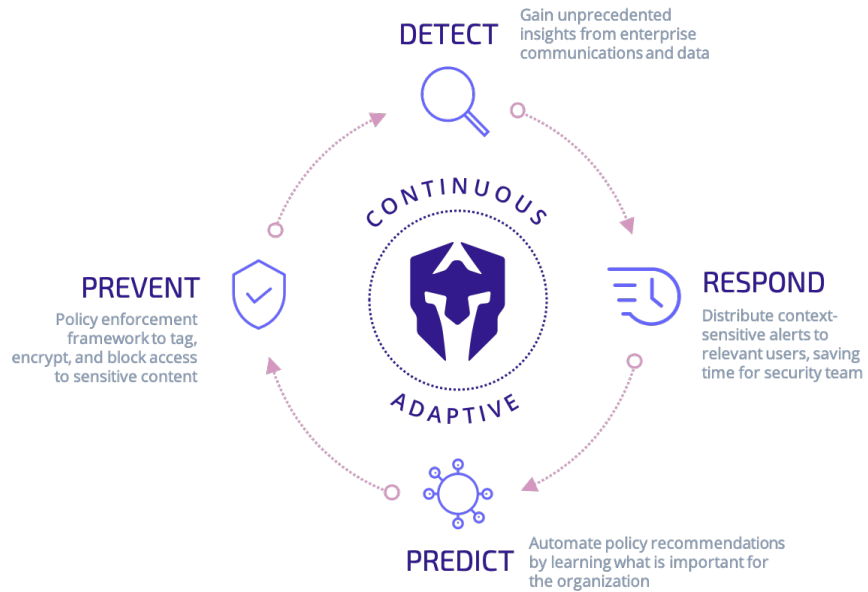

Classify content across folders
Search and find indexed content
Detect PII/PCI violations

Score

Compute risk scores
Spoof propensity

Integrate

Microsoft Office 365, Exchange Server, OneDrive G Suite

About Armorblox

Armorblox has built the world's first natural language understanding platform, providing a new way to intelligently detect, alert and protect against identity-related attacks and data loss. Enterprises use Armorblox to automatically create and adapt policies, continuously measure risk exposure, and reduce alert fatigue. Founded in 2017, Armorblox is headquartered in Cupertino, CA and backed by General Catalyst.
