

Mitas App upgrade allows farmers worldwide to determine the right tyre pressure in the field and on the road

Prague, October 12, 2021 – Mitas has launched a major upgrade to its handy tyre pressure app, adding new features and languages to reach farmers wherever they are. Designed to allow farmers to calculate and set the right agriculture tyre pressure depending on speed and loads for their operations, the Mitas App increases cost efficiency and production.

The app, now available in six languages – English, German, French, Italian, Spanish and Czech – is free for both Android and iOS devices. Users can also locate the Mitas dealer closest to them.

“Mitas has provided tyres to farmers for over a century, and the app is just another way we help farms run more efficiently. This user-friendly app and tyre pressure calculator gives farmers quick access to the information they need, so they can accelerate machine performance in the field or on the road,” remarked Regina Fíčková, Mitas Digital Marketing Manager.

Maintaining accurate tyre pressure is essential to smooth operations and can reduce operation costs by over 20%, making the Mitas app an indispensable tool for large or small farms. Applying the right tyre pressure efficiency according to speed and loads gives better traction, less soil compaction, and reduced fuel consumption.

Mitas App users will also receive notifications with important information and updates so farm managers can stay on top of the latest news affecting their business.

Download the free Mitas tyre pressure app from the **App Store** or **Google Play** from the QR codes below:
