

ESI ACADEMY

Learning programs

In the ESI academy, we provide five specialized learning programs, designed to delve into diverse roles within systems engineering. Our learning programs strike a balance between knowledge, skills and mindset. Being a systems engineer not only requires knowledge and skills but also, and maybe even more important, the mindset to apply them in a dynamic multi-stakeholder business context.

Knowledge

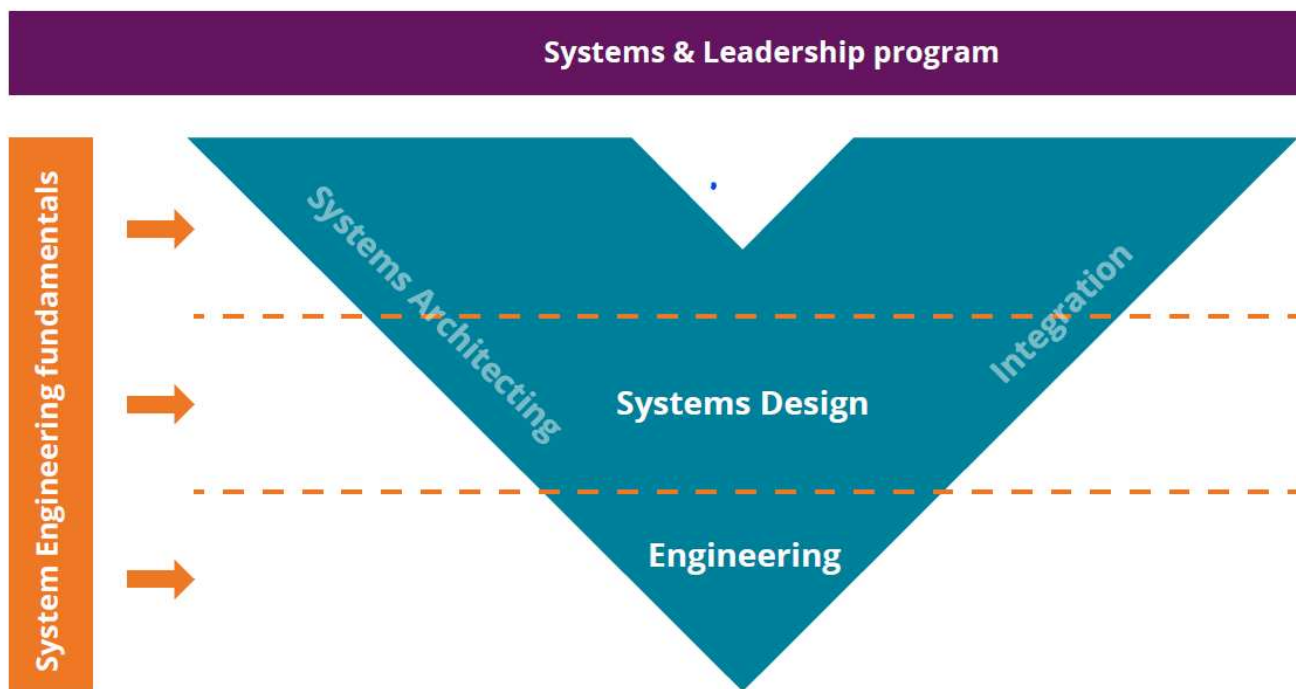

Skills

Mindset

Much like the interconnected nature of systems, our learning programs are also interconnected. We not only focus on the way of working within a specific domain but there is always overlap with key aspects of other roles.
