# Objectives of Aerosol Measurement

Reference particle size distributions for all test materials

Understanding of particle properties beyond size e.g. charge

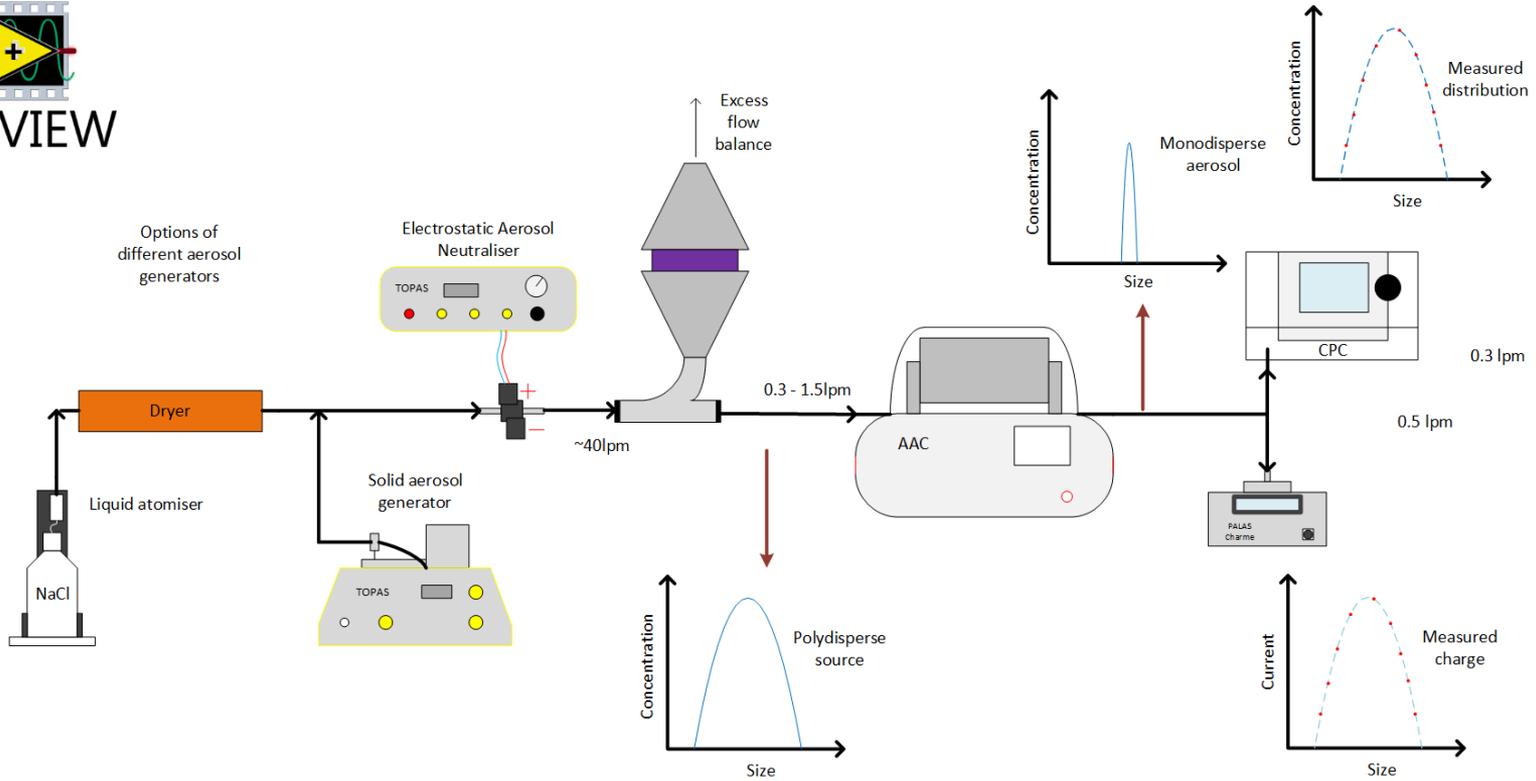

Measure separation performance and influence of separation on charge

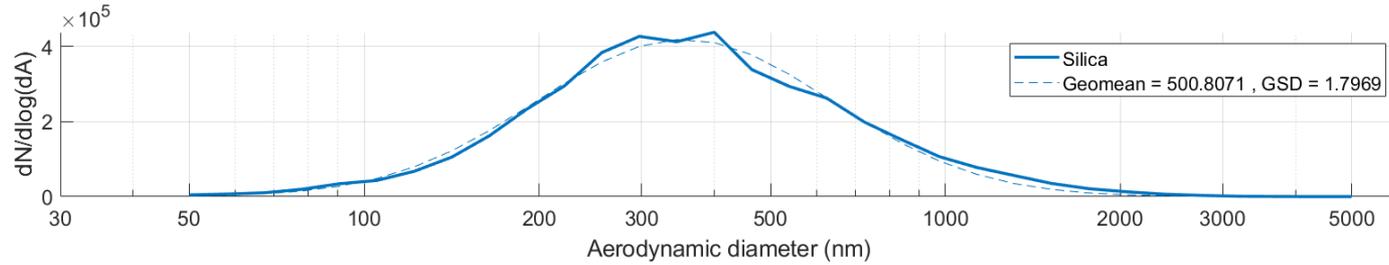

Compare lab controlled scenarios to real world measurements to test validity

# Size and charge distribution

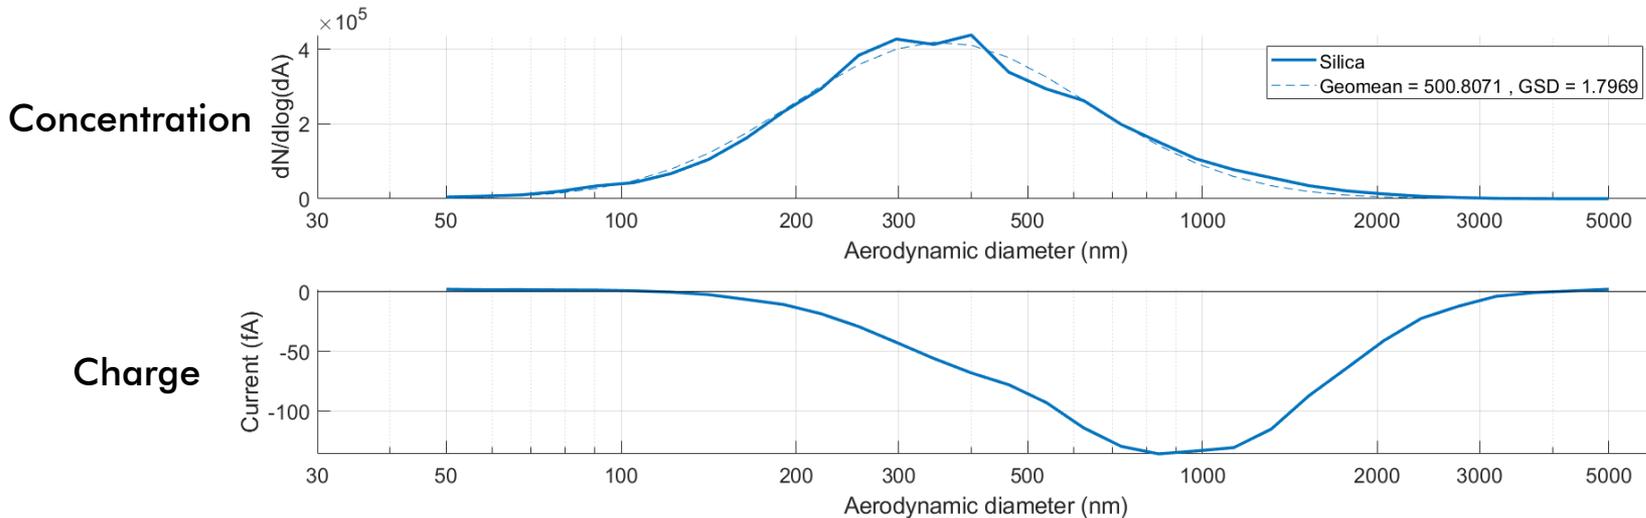

# Silica dust (ISO12103 A2)

Concentration

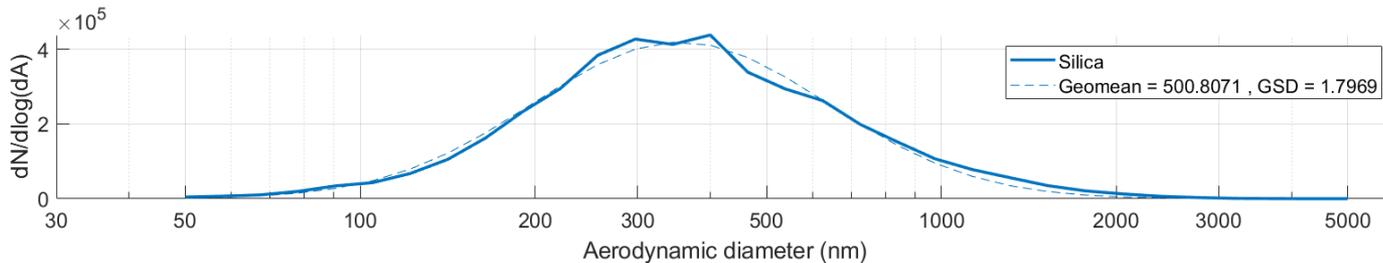

# Silica dust (ISO12103 A2)

# Neutralisation

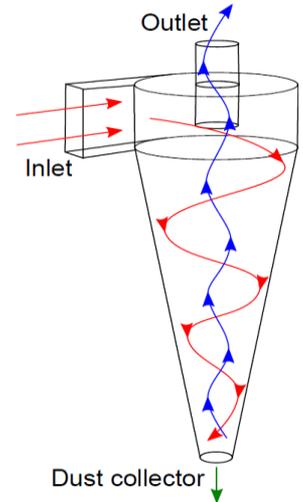

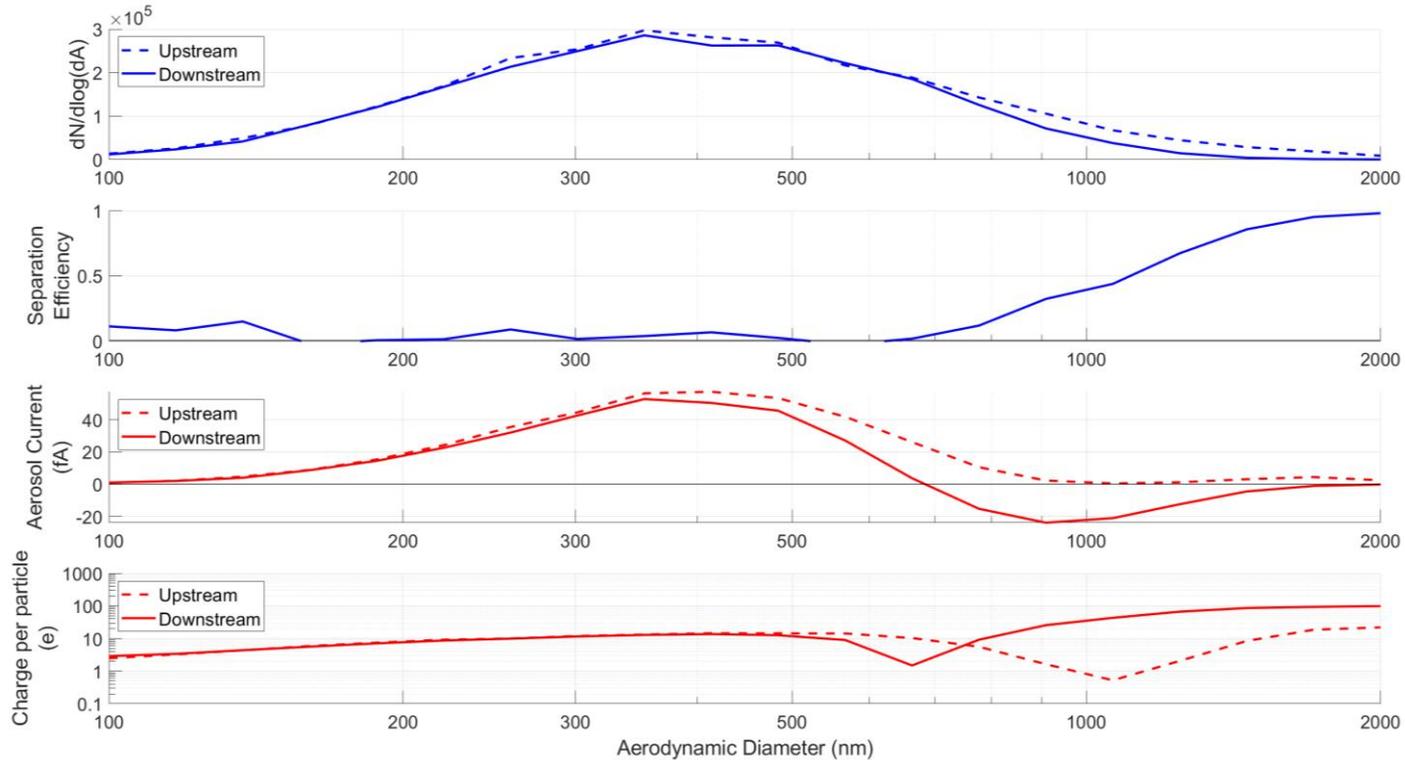

# Silica vs Dolomite

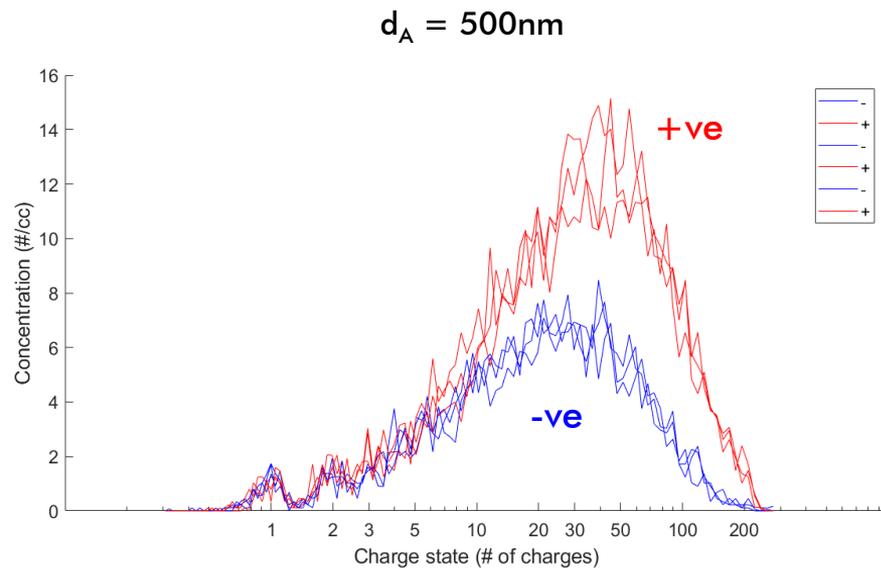

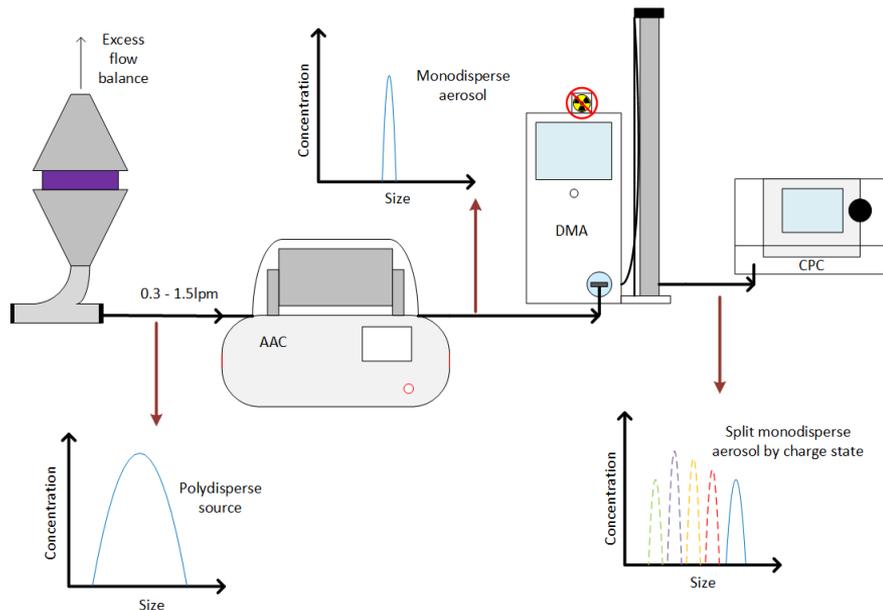

# Fine Dust in Cyclones

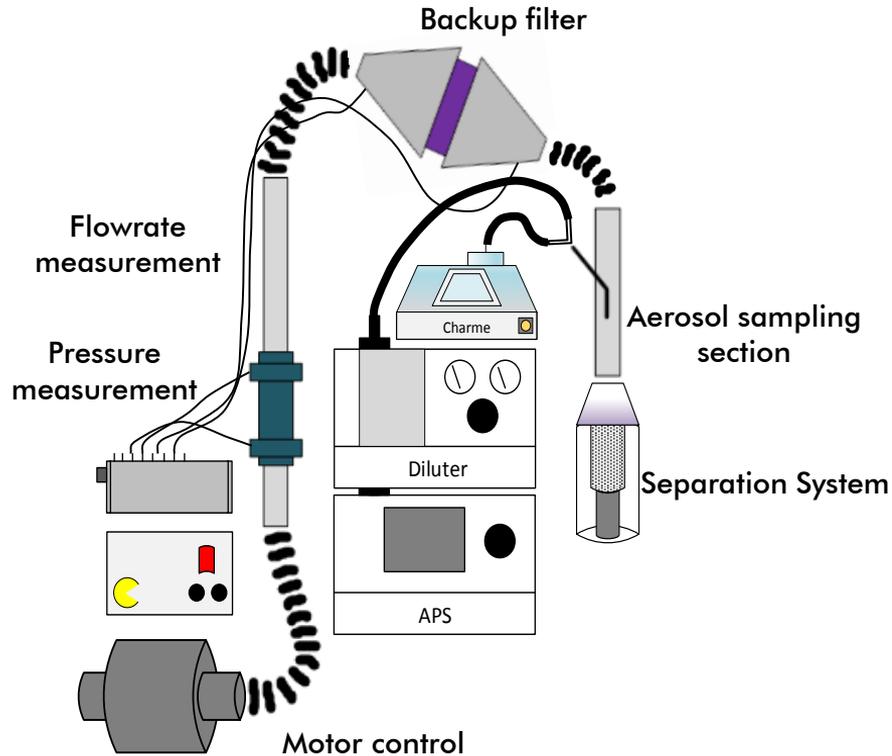

# Separation System Influence on Charge

# Charge balance

# Instrumented Vacuum Cleaner

## Live measurement:

- Aerodynamic performance
- Particle size distribution
- Net particle charge

- Understand both similarities and differences between test materials
- Particle properties beyond size distribution matter for system performance
- Value in developing test systems that measure more than just size
- Detailed lab testing helps correlate and query the real world
