

Power Platform

Enhance Creation with Low-Code

Power Platform

Drive Innovation and Transform Workflows Across Your Organisation

The Microsoft Power Platform is a low-code business application platform, consisting of five different elements, all of which are helping drive innovation across organisations by allowing you to create custom solutions, generate data insights and streamline workflows.

Each element of the Power Platform offers a user-friendly interface that empowers even non-technical staff to create and design without the need for any knowledge of traditional coding languages. It also helps professional developers streamline development by focusing their skills on more complex additions. From deploying a webpage to generating a reporting dashboard, the Power Platform allows you to take control of your business technologies and design according to your business' specific needs.

Create modern apps and webpages with Power Apps and Power Pages, that can be then augmented through integrations with other elements of the Power Platform. Generate a reporting dashboard with Power BI to provide insightful business data. Automate and streamline workflows with Power Automate. Create a chatbot for your website to help you manage customer queries with Power Virtual Agents. Power Platform enables organisations to boost digital transformation by leveraging the power of low-code and bringing solution development in-house.

Elements of Power Platform

Power BI
Business analytics

Power Apps
App development

Power Automate
Process automation

Power Virtual Agents
Intelligent virtual agents

Power Pages
External-facing websites

Why Choose Storm Technology?

Having received the Microsoft Solutions Partner Designation for Business Applications in recognition of its expertise in Dynamics 365 and Power Platform solutions, Storm Technology is a Microsoft partner of choice for low-code solutions powered by Power Platform.

With over 25 years experience delivering innovative business solutions powered by Microsoft, Storm Technology is committed to service excellence and driving customer success. Our team is on hand to help you realise the possibilities of what Microsoft's Power Platform can achieve for your business and drive digital transformation across your organisation.

Solution Capabilities

Power Apps:

A low-code development platform that helps you to build secure business apps without even a single line of code, empowering all staff to create responsive, custom apps. Power Apps allows you to quickly respond to business challenges by rapidly speeding up the application development process, so you can remain agile and create tailored business apps as needed.

Power Pages:

With an intuitive drag-and-drop interface, seamlessly create unique webpages using pre-designed templates that can be customised to suit your needs. For professional developers there is even an option to integrate advanced tools, such as Azure DevOps or Visual Studio Core Web, to further enhance the webpage capabilities. With Microsoft's Power Pages, everyone from citizen developers to professional developers is empowered to design and create unique webpages.

Power Automate:

Power Automate allows your business to create automated workflows and data flows between apps and services to help streamline workflows and reduce manual tasks, allowing you to focus on more value-add tasks. Automate tasks like data uploads, sending reminders and invoicing procedures using pre-built connectors and templates. Drive a productive workforce by reducing busy work and tedious processes in your business.

Power Virtual Agents:

Easily create chatbots with Power Virtual Agents to respond to customer queries quicker and more effectively. Automate responses to common queries and allow your customer service agents to deal with more complex queries that require human intervention. Power Virtual Agents can be connected to backend systems like D365 Customer Service Insights or D365 Sales to view the customers entire history with the company, such as previous interactions and purchases, so your chatbot can provide more accurate, personalised responses. Optimise your company's customer service and boost customer satisfaction with Power Virtual Agents.

Power BI:

Integrable with over 70 of the world's most popular business solutions, Power BI allows organisations to get a clear overview of critical business information. With Power BI you can effortlessly create powerful data visualisations and dashboards that provide clear metrics and insights into business performance, so you can make informed, data-driven decisions. You can even use the platform to help create reports quicker using a drag-and-drop-interface. Power BI helps you to foster strategic decision making in your business and enhance data value.

Key Benefits

Seamless Integration

Each element of the Power Platform can be integrated with other elements to enhance functionality. Further, the solutions can be integrated with systems outside of the Power Platform, such as Azure, M365 or D365 apps, allowing you to centralise business information and streamline workflows.

Reduce Costs

According to Forrester low-code/no-code solutions require 70% fewer resources than conventional app-building methods, which can reduce the average costs of app development by up to 50%. Leverage Microsoft's Power Platform to keep solution development within the organisation and save the time and cost of hiring an external developer.

Enhance Security

Recognised by Gartner as a 2023 leader for Enterprise Low-Code Application Platforms, Microsoft is renowned for its unmatched enterprise-level security. Safeguard critical business data and minimise risk by building on Power Platform.

Harness the Power of AI

Leverage the power of generative AI and large language models with Copilot, Microsoft's AI Virtual Assistant built into the elements of Power Platform. Use natural language prompts to describe what you need and Copilot can help you create, automate and streamline work across Power Platform.

- Rapidly develop and customise an entire app through a conversational experience in Power Apps
- Create unique webpage layouts, design themes and generate forms from simple prompts in Power Pages
- Author flows to automate processes and streamline tasks in Power Automate
- Quickly create a chatbot using natural language prompts in Power Virtual Agents
- Design custom dashboards and perform rapid data analysis with Copilot in Power BI
