CASE STUDY

ABP Food Group

Digital Transformation with Power Platform

Streamlining Business Processes with Power Platform

Established in 1954, ABP Food Group ("ABP") is one of Europe's leading beef and lamb processors, working with over 45,000 farmers to deliver a broad range of fresh and frozen meat and meat products to the retail, wholesale and food-service markets in Europe and worldwide. ABP is also active in pet food manufacturing, animal by-products and renewables. Head-quartered in Ardee, Co. Louth, with over 14,000 employees, ABP has operations across Ireland, Northern Ireland, England, Scotland, Wales and mainland Europe.

In 2024, ABP partnered with Storm Technology with the aim of modernising an existing approvals process by adopting innovative technology. To help streamline the process, boost efficiency and optimise time management, it was decided that low-code solution development platform, Microsoft Power Platform would be the technology of choice. Storm worked with ABP to fully understand the existing approval process and identify specific business needs. Thereafter, Storm assisted with the design and development of a customised approval process app using Microsoft Power Apps, which allows businesses to design and create custom built applications.

Integration with other business solutions including Microsoft SharePoint, Power BI and Power Automate has further streamlined processes by enabling seamless data flow between systems and facilitating work flow automation. The solution also benefits from a robust security model to manage access and permissions, enhancing information governance and security. With the ability to scale in line with the organisation's evolving needs, the digital solution will continue to support the organisation now and into the future.

Commenting on the project, Aisling Brady, Group Applications Manager with ABP said, "Storm was a valued partner to ABP on this project, demonstrating expertise and a 'can do' attitude to deliver a successful outcome."

AT A GLANCE

Client:

ABP Food Group

Industry:

Manufacturing

of Employees:

14,000 +

Business Challenge:

- ▶ Modernising an existing approval process.

Services / Solution Overview

- ▶ Technology:
Power Platform

Benefits Realised

- ▶ Improved efficiency with the implementation of a centralised approvals database.
- ▶ Enhanced communication, and transparency.
- ▶ Strengthened security and governance.
