

POP-UP BARRIERS

1

SPILL BARRIER

With DENIOS Pop-Up Spill barriers you can have the protection you need in a completely self contained, passively powered and self closing barrier that could save money or even lives.

- Constructed with a built in sump that sits below ground level and houses the barrier during normal operations.
- A chemical-resistant gasket runs the entire length of the sump from pier to pier, providing a liquid-tight seal.
- With no berms or ramps, normal foot or vehicle traffic is completely unencumbered.

FEATURES INCLUDE:

- Stainless steel - High chemical resistance
- Self-contained
- Passively powered
- Fully Automatic
- Self closing
- Designed to fit in doorways between 3 and 16 feet

HOW DOES IT WORK?

When a flow of liquid reaches the barrier, it's collected into the sump that houses the barrier wall. As the volume of liquid increases, it displaces the wall from its horizontal position. The built in mechanisms then bring the barrier to its full locked and upright position, containing or holding back the impending liquid.
